MANAGEMENT SUMMARY

This study examines three cemeteries in the City of Suwanee, Georgia, including what is known as the Shadowbrook or City Cemetery, the Jackson Street or African American Cemetery, and a small family cemetery in the new Sims Lake Park.

The history of the three cemeteries is poorly documented – and additional historical research was not included in this preservation assessment. The City, through various and diverse means has, however, assumed care for these three cemeteries and sought assistance from Chicora Foundation.

Our first recommendation is that the City obtain fee simple ownership in all three cemeteries, using quit claims or whatever legal means are appropriate. It will be very difficult (perhaps impossible) for the city to assume appropriate control and care for the cemeteries without having ownership authority.

Our second critical recommendation is that no additional burials be allowed in any of the cemeteries without a deed to prove plot ownership and the family assuming all responsibility for any damages incurred during the grave opening and closing.

It is also important for all stewards of historic cemeteries to realize that these properties are social, historic, architectural, and archaeological artifacts. When there is little else physically remaining of a community's earliest history, the local cemetery provides a unique tie to the past that would otherwise be lost.

Therefore, historic cemeteries require very specific consideration and different care

from the other types of open sites found in most communities. They also require care different from that typically given to modern city parks and other recreation facilities.

Most notably, historic cemeteries require caregivers to give careful attention to the Secretary of the Interior's Standards for Preservation. These guidelines should be adopted by the City of Suwanee and should guide all future actions.

Over the years the cemeteries have received uneven care. The landscape has been inexplicably altered. Markers have been damaged through inappropriate care and management. Many graves are no longer marked (or may never have been marked). As a result of deferred or inappropriate maintenance, a number of issues – many of them critical and costly – require the City's immediate attention.

This report evaluates these needs, classifying them into three broad categories:

- Those issues that are so critical – typically reflecting broad administrative issues, health and safety issues, and issues that if delayed will result in significantly greater costs – that require immediate attention during the immediate fiscal or calendar year.
- Those issues that, while significant and reflecting on-going deterioration and concerns, can be spread over the next 2 to 3 years. This allows some budgeting flexibility, but this flexibility should not be misconstrued as a reason to ignore the seriousness of the issues.

- Finally, those issues that represent on-going maintenance and preservation issues. These costs can be spread over the following three to five years. Like the Second Priority issues, this budgetary flexibility should not be interpreted as allowing these issues to slide since further delay will only increase the cost of necessary actions.

At Shadowbrook Cemetery we recommend work totaling \$84,150 spread over five years. The first phase, costing \$27,500, includes critical conservation work, making repairs to monuments that are unstable and therefore hazardous to the public. Second phase work, with a cost of about \$46,500, includes additional conservation costs, as well as renovation of lawn areas, and care for the historic oak on the property. We also recommend historical research. The third phase costs are limited, about \$10,150, and involve primarily continued tree care and the development of a promotional brochure.

At the Jackson Street Cemetery the preservation needs are more complex, with costs of about \$127,750 over five years. The first priority costs of about \$26,750 are focused on changes at the entrance to the cemetery, infilling graves and resetting stones, and removal of the pine tree in the cemetery. A modest sum of \$2,800 is recommended for stone conservation at this cemetery. Second priority costs of \$96,000 include primarily resodding, weed eradication, and vegetation removal to form a buffer along the cemetery edges. Also included is \$8,000 for historical research. The final phase of work includes only \$5,000 to produce a brochure for the cemetery.

At Sims Lake Cemetery we recommend \$62,000 in preservation funds over five years. The first phase, with costs of \$20,500, includes assessment and pruning of trees, and removal and replacement of dead cedars. The second priority actions include additional tree care, creation of a pathway to the cemetery for staff

use, and \$12,500 in conservation treatments to ensure the stabilization and long-term preservation of the stones left in the cemetery. The final phase includes only brochure production.

INTRODUCTION

The Project

In late July 2008 the City of Suwanee, in the process of revamping its Cemetery Preservation Committee, requested a proposal for the assessment, ground penetrating radar (GPR) survey, and mapping of three cemeteries currently being cared for by the City. These three cemeteries included the Jackson Street Cemetery, an African American cemetery just over an acre in extent; the Shadowbrook Cemetery, the white community's cemetery measuring about 0.7 acre; and a small family cemetery located on the newly opened Sims Lake Park, measuring perhaps 0.2 acres.

Suwanee is situated in northwestern Gwinnett County, just west of I-85 and northeast of Atlanta (Figure 1).

A proposal addressing these concerns was submitted by Chicora in partnership with GEL Geophysics on August 4 and our proposal was accepted by the City in early October.

Our proposal involved essentially six discrete, but overlapping tasks:

1. A kick-off meeting with the City to outline the work, explain procedures, and ensure that all work would be accomplished in a timely and cost-effective measure.
2. A ground penetrating radar (GPR) survey of the three cemeteries, with the goal of identifying unmarked burials. This would assist the City in protecting the properties by ensuring that the boundaries were accurately identified. It might also contribute

information to a better understanding of the cemeteries' use over time.

3. Coupled with the GPR survey, each cemetery was to be mapped, providing a graphic of the boundaries and features suitable for integration into a GIS database.
4. Stone-by-stone recordation to include minimally the marker inscription (i.e., a complete transcription) and a physical description of the memorial (i.e., type of marker, such as die on base, tab in socket, ledger; the inscription technique, for example, carving, bas relief, painted; the material, including marble, limestone, concrete; and the presence of a stonecarver's name if visible). Chicora

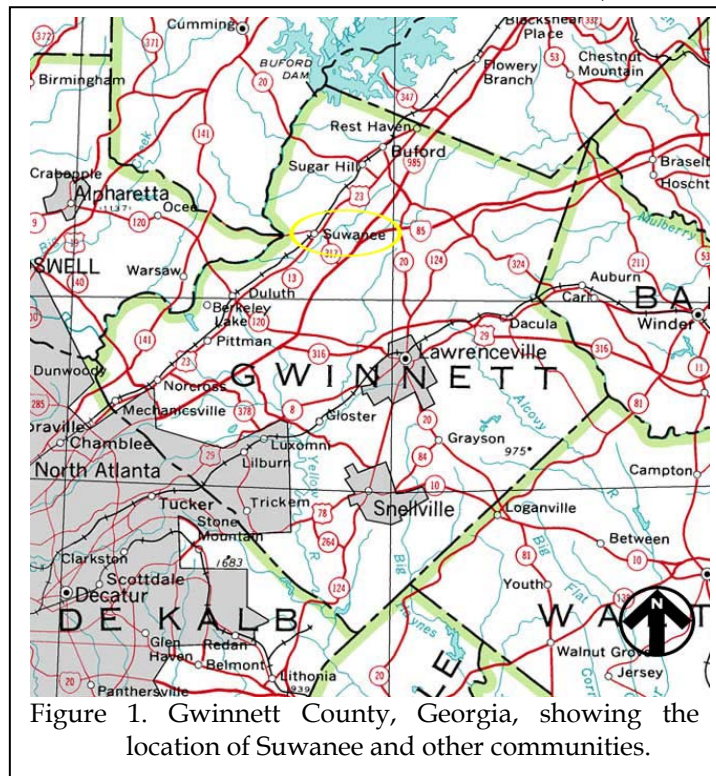

Figure 1. Gwinnett County, Georgia, showing the location of Suwanee and other communities.

also included a photograph of every stone in each of the three cemeteries.

5. A conservation assessment of those stones indicating some need for repair or treatment. The assessment form includes a cost estimate for treatment, as well as a priority for treatment.
6. A cemetery assessment of the three properties. Simply put, an assessment provides information on the long-range preservation needs of the cemetery. Topics specifically requested by the City include recommended security measures, recommended on-going maintenance, a review of policies dealing with future burials at the three sites, an overview of needed historical documentation; recommendations for public participation; and recommendations for funding sources.

Not included in the tasks was additional historical research, any repair of damaged features, or any formal stake-holder meetings.

Chicora Foundation partnered with GEL Geophysics – a firm specializing in GPR work. In addition, the firm has extensive experience working with historic cemeteries and therefore is especially knowledgeable in distinguishing graves from other subsurface anomalies. GEL was responsible not only for the GPR survey, but also the total station mapping of the three cemeteries.

The work in the cemetery was conducted on Tuesday through Thursday, October 21 through 23, 2008. The investigations were conducted by Michael Trinkley and Debi Hacker with Chicora Foundation. The GEL Geophysics work was coordinated by Mr. Jorgen Bergstrom, Director of Operations in that firm's Marietta, Georgia office.

During this on-site study we met with Mr. James Miller, P.E., the director of Public

Works and Inspections; Ms. Elvira Rogers, Administrative Services Director; and Mr. Bill Barnes, also with Public Works.

Of the three cemeteries involved in this study (out of eight known to exist in the city limits), the city owns in fee-simple only one of the three – Sims Lake. Ownership of the remaining two is not entirely clear. If the city has made the decision to care for these cemeteries, a critical first step is to acquire fee simple ownership in the properties. It will be very difficult – perhaps impossible – to implement the preservation efforts necessary to secure and protect these sites without ownership rights.

Preservation Fundamentals

Preservation is not an especially difficult concept to grasp, although the key principles are not always clearly articulated. The fundamental concepts are well presented in the Secretary of the Interior's Standards for Preservation (see Table 1).

This document reminds us – at least at a general level – of what caregivers need to be thinking about as they begin a cemetery preservation plan. Those responsible for the care of Suwanee's cemeteries should be intimately familiar with the eight critical issues it outlines.

For example, all other factors being equal, a cemetery should be used as a cemetery – not to walk dogs, not as a playground, and not as a park. And until the caregivers are able to do what needs to be done, it is their responsibility to make certain that the site is preserved – it must not be allowed to suffer damage under their watch.

Caregivers must work diligently to understand – and retain – the historic character of the cemetery. In other words, they must look at the cemetery with a new vision and ask themselves, "what gives this cemetery its unique, historical character?" Perhaps it is the

INTRODUCTION

Table 1.
Secretary of the Interior's Standards for Preservation

1. A property will be used as it was historically, or be given a new use that maximizes the retention of distinctive materials, features, spaces, and spatial relationships. Where a treatment and use have not been identified, a property will be protected and, if necessary, stabilized until additional work may be undertaken.
2. The historic character of a property will be retained and preserved. The replacement of intact or repairable historic materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Work needed to stabilize, consolidate, and conserve existing historic materials and features will be physically and visually compatible, identifiable upon close inspection, and properly documented for future research.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. The existing condition of historic features will be evaluated to determine the appropriate level of intervention needed. Where the severity of deterioration requires repair or limited replacement of a distinctive feature, the new material will match the old in composition, design, color, and texture.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

landscape, the old and stately trees, the large boxwoods, or the magnificent arborvitae. Perhaps it is the very large proportion of complex monuments, or the exceptional slate markers. It may simply be that it is a unique representation of a cemetery type rarely seen in a rapidly developing urban setting. Whatever it is, those undertaking its care and preservation become the guardians responsible for making certain those elements are protected and enhanced (whether they are particularly appealing to the caregivers or not).

Whatever conservation efforts are necessary must be done to the highest professional standards; these conservation efforts must be physically and visually

compatible with the original materials; these conservation efforts must not seek to mislead the public into thinking that repairs are original work; and the conservation efforts must be documented for future generations. If the caregivers aren't conservators, it is their responsibility as the stewards of the property to retain a conservator appropriately trained and subscribing to the Code of Ethics and Standards of Practice of the American Institute for Conservation (AIC).

The Secretary of the Interior reminds those responsible for the resources that each and every cemetery has evolved and represents different styles and forms. It is the responsibility of caregivers to care for all of

these modifications and not seek to create a "Disney-land" version of the cemetery, tearing out features that don't fit into their concept of what the cemetery "ought" to look like.

Likewise, caregivers are reminded that there will be designs, monuments, and other features that characterize the cemetery – and the caregivers are responsible for identifying these items and ensuring their preservation. Caregivers must be circumspect in any modifications, ensuring that they are not destroying what they seek to protect.

Before acting, those responsible for preservation are required as good and careful

stewards to explore and evaluate the property, determining exactly what level of intervention – what level of conservation – what level of tree

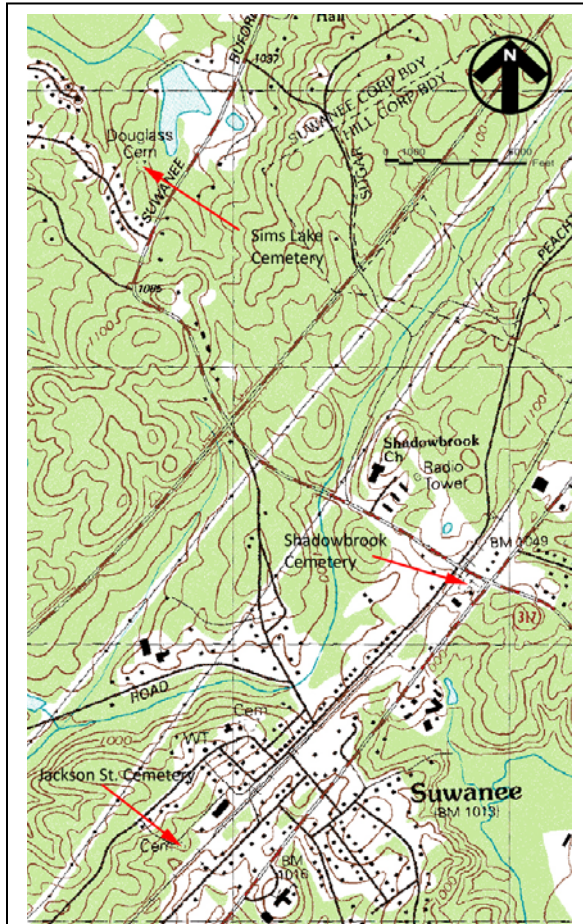

Figure 2. Portion of the 1992 Suwanee, Georgia USGS topographic map showing the location of the three cemeteries.

pruning – is actually necessary. And where it is necessary to introduce new materials – perhaps a pathway – into the cemetery, they must do their best to make certain these new elements are not only absolutely necessary, but also match the old elements in composition, design, color, and texture. In other words, if the cemetery has brick pathways, they would be failing as good stewards if they allowed concrete pathways – especially if the only justification was because concrete was less expensive.

Where conservation treatments are necessary, the Secretary of the Interior tells stewards that they must be the gentlest possible. However phrased – less is more – think smart, not strong – caregivers have an obligation to make certain that no harm comes to the resource while under their care. And again, one of the easiest ways to comply is to make certain that caregivers retain a conservator subscribing to the ethics and standards of the American Institute for Conservation.

Finally, the caregivers must also recognize that the cemetery is not just a collection of monuments and the associated landscape – the cemetery is also an archaeological resource. They must be constantly thinking about how their efforts – whether to repair a monument, put in a parking lot, or resurface a path – will affect the archaeological resources – archaeological resources that just happen to be the remains of people buried at the cemetery by their loved ones.

These are especially critical issues for each of the three cemeteries included in this assessment. Modifications at the cemeteries have taken place with no documentation, leaving caregivers guessing as to the nature of the work, the reason it was done, how it was conducted, and even who did the work. Original fabric has deteriorated from lack of care. Even the landscape has been compromised by development activities on surrounding parcels and a lack of careful attention to critical management issues.

Our first recommendation, therefore, is that the Cemetery Preservation Committee, as well as the Suwanee City Council, become thoroughly familiar with the Secretary of the Interior's Standards for Preservation and reaffirm their responsibility as stewards of this historical resource to ensure that future preservation efforts are consistent with sound preservation principals and practices. These standards must become "talking-points" for all future discussions and decisions made concerning the graveyards.

INTRODUCTION

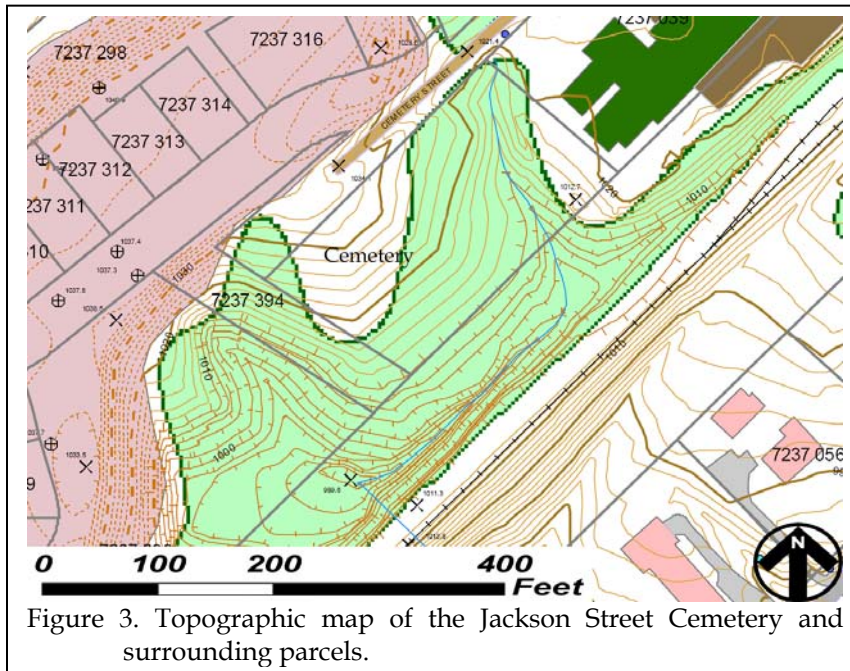

Figure 3. Topographic map of the Jackson Street Cemetery and surrounding parcels.

The Cemeteries, Their Setting, and Context

All three cemeteries (in fact, the northern half of Suwanee) are situated in census tract 502.02.

The 2000 census identified 8,725 people or 2,947 households in the city. Suwanee is a predominately white community (84.5%) and the African American population accounts for only 6.4% of the total. The median household income in Suwanee is \$84,038, and the median income for a family is \$91,519. About 1.5% of families and 2.2% of the population were below the poverty level.

Historically, Suwanee was a traditional, rural agricultural community dominated by single family homes on large lots; there has never been a significant demand for rental housing. In 2000, the census found 2,279 owner-occupied units (77.3%), with an additional 668 (22.7) rental units.

Nearly 93% of Suwanee's

population, 25 years or older, has graduated from high school and nearly 46% have graduated from college.

Jackson Street Cemetery

The Jackson Street Cemetery is situated at the southwestern edge of the city, bordered to the southeast by the Southern Railroad tracks and to the northwest by Cemetery Street – also known as Jackson Street. To the east is a fiberglass manufacturing facility (Suwanee-Southern Corp.), while a new housing development, Old Suwanee, is situated to the north and west.

The 2030 plan shows the area as “institutional.” This cemetery is set only slightly back from Jackson Street, separated from the street by a narrow zone of landscaping. The cemetery slopes steeply to the rear (southeast) of the tract.

The cemetery includes two parcels. The main tract, PIN 7237-040, is identified as the 0.8 acre “Colored Peoples Cemetery” according to

Figure 4. A portion of the Jackson Street Cemetery, looking east.

the Gwinnett County GIS. To the north and west is an additional strip of 0.27 acre, PIN 7237-394, that was acquired by the City in 2003 through a quit claim deed. It presumably is not part of the cemetery, although the cemetery boundaries are poorly defined.

The cemetery is situated on the south face of a ridge. To the northeast is a small creek that flows southerly, then follows the Southern Railroad easement before being channelized southward. It is difficult to assess the original southern edge of the cemetery since much of this topography appears to have been cut for the railway corridor. Elevations in the cemetery drop from about 1030 feet above mean sea level (AMSL) to at least 1010 feet AMSL. Soils are Madison sandy clay loams characterized by a clay subsoil. Side slopes, with up to 30% slopes are eroded.

The cemetery is loosely organized, with rows generally aligned north-south and graves oriented east-west. There are several clearly defined family plots with coping, although most of the cemetery consists of individual graves, some in obvious kin groupings. The topography has an undulating character, typical of unmarked graves. African American features, such as exposed vault tops and hand-made concrete markers, are present. It is not, however, uncommon for African American cemeteries to imitate nearby Euro-American cemetery design - a situation seen clearly in such cities as Columbia, South Carolina, Petersburg, Virginia, and Atlanta, Georgia. It is not unexpected to see a similar situation in Suwanee.

Shadowbrook Cemetery

This cemetery, also known simply as City Cemetery, is situated on the northwestern corner of the

intersection of Lawrenceville Suwanee-Suwanee Dam Road (GA 317) and Buford Highway (US 23 and GA 13). Both roads are very busy traffic corridors. To the south is the recently renovated Suwanee Municipal Court Building, while to the north and west is an access road for the city's public works department. The Southern Railroad and Main Street are situated further to the north. The 2030 plan shows the area as "institutional/public."

The cemetery is a triangular plot, PIN 7236-018, encompassing 0.67 acres. The cemetery is on a west facing ridge nose with elevations ranging from about 1050 feet AMSL along Suwanee Dam Road to 1044 feet at its southwestern corner. Visual inspection of the cemetery shows denser burials on the higher ground, with fewer obvious graves to the north and west. Soils in the cemetery area are Cecil sandy loams - well drained soils with a distinct clay layer a foot or more below grade.

There is no distinct entrance to the

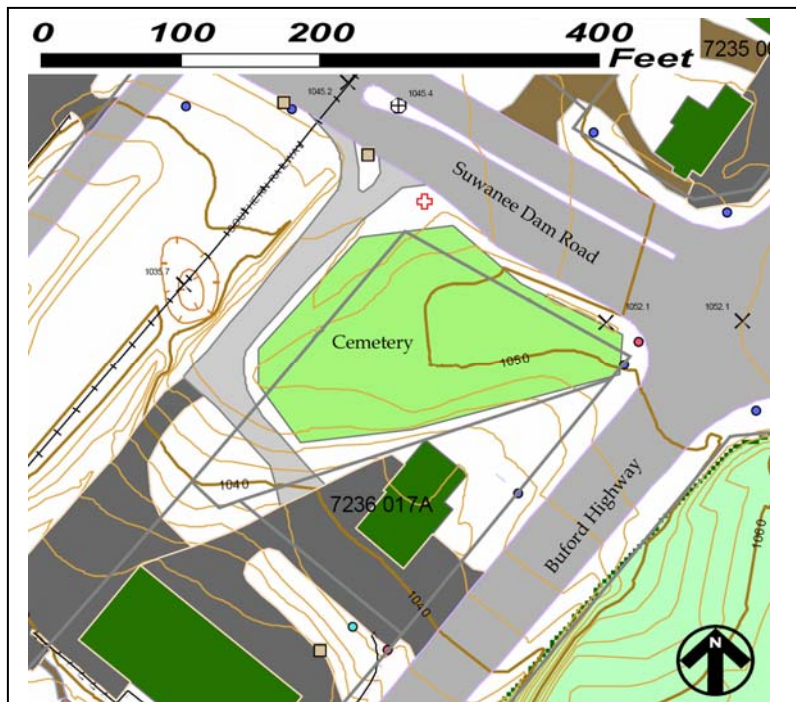

Figure 5. Topographic map of the Shadowbrook Cemetery and surrounding parcels.

INTRODUCTION

Figure 6. View of Shadowbrook Cemetery, looking northeast.

cemetery and it is difficult to envision the cemetery historically. There are a number of family plots, well defined with coping or fencing. Relatively well defined rows are visible

on the ground and the graves are oriented roughly east-west. Although the parcel is triangular, mapping of graves shows the boundaries to be roughly rectangular, with the long dimensions oriented east-west.

Developed in the late 1880s, Shadowbrook Cemetery originated at a time when the Rural Cemetery movement with its picturesque, natural garden-like grounds with numerous monuments and fences had given way to the pastoral Lawn-Park movement of Adolph Strauch (known as the “Father of the Lawn Park Cemetery”). The designs of the lawn-park superintendents were simpler, more spacious, and more pastoral. Shadowbrook has relatively few large, three-dimensional markers. Coping and fences, while present, are muted and there is a mix of die on base stones and lawn markers. The cemetery appears to represent the period when tastes in mortuary customs were in transition.

Sims Lake Park Cemetery

This cemetery is shown on the USGS topographic map as Douglass Cemetery and is situated on a newly opened city park at 4600 Suwanee Dam Road. The park encompasses 62 acres, although the cemetery is, at most, 0.2 acres. Situated at the southern edge of the park, there is no path or road that runs directly to the cemetery. Access, however, is not difficult if one is familiar with its location.

The cemetery is bounded to the south and west by single family homes, although the park is set aside as recreation space in the 2020 plan.

Figure 7. Topographic map of the Sims Lake Park Cemetery and vicinity.

Figure 8. View of the Sims Lake Cemetery.

The PIN for the park is 7276-008 and the cemetery is found in a densely wooded area at an elevation of about 1057 feet AMSL. Soils in the cemetery area are Madison sandy clay loams – well drained soils that are formed from weathered mica schist or gneiss. Residential lots are found to the southeast and southwest of the cemetery and a man-made pond is found to the northeast.

The cemetery is a typical family burial ground. Rows are suggested, but not always clear. There are a mix of grave forms and the cemetery exhibits several graves that are clearly outliers – being situated in areas somewhat removed from other burials in the cemetery. Most, but not all, graves are marked. Orientations are roughly east-west, although there is considerable variability, probably representing the different times, conditions, and situations under which the graves were dug. There is no fence or other clearly defining boundary at this graveyard (a fence was added after the completion of this study).

Although heavily wooded, most of the trees in the cemetery

represent recent second growth pine and hardwoods. A few, probably historic, cedars have declined and are today dead. The dense overstory has prevented herbaceous vegetation and the cemetery is generally open.

Factors Affecting the Landscape Character

Suwanee is situated in the Georgia Piedmont, an area more rolling and hilly than the Blue Ridge in the furthest northern and northwestern reaches of the state. Most of the rocks of the Piedmont are gneiss and schist, with some marble and quartzite. Rivers and creeks form a well-defined drainage pattern flowing primarily southeastward. Gwinnett County is split between the two physiographic provinces. The southern, and larger, is known as the Winder Slope – a gently rolling area that is dissected by the headwaters of numerous streams with fairly deep and narrow stream valleys. The northern edge of the county is in the Gainesville Ridges District, which consists of a

Figure 9. Statewide drought index.

INTRODUCTION

series of northeast-trending, low, linear, parallel ridges separated by narrow valleys.

Gwinnett is characterized by a temperate climate with cold winters and hot, humid summers, at least by modern standards. Average winter temperatures range from the low to the mid-50s, while the summer temperatures are in the high 80s. During the fall, winter, and spring the weather is controlled largely by the west to east motion of fronts and air masses. Air exchanges are less frequent in the summer and maritime tropical air can persist in the region for relatively long periods - giving rise to very warm, humid days.

Typically abundant precipitation is distributed fairly evenly throughout the year, with an average annual precipitation of about 50 inches. Figure 9, however, reveals considerable potential for drought. In fact a generally wet 2005 has been followed by a dry 2006 lasting through 2007.

Although the drought has abated, especially along the coast, the Atlanta area is still (June 2008) listed as being in a severe drought, with abnormally dry to moderate drought conditions continuing for central Georgia. A Level Four Drought Response remains in effect for Gwinnett County. This limits residential watering of landscapes, but provides an exemption for new landscaping. Landscaping companies seeking to apply for this exemption, however, must successfully complete the Urban Agriculture Council's Registration Program.

The area has an average growing season of about 234 days, although this will vary by specific location, with low areas often

evidencing late frosts. Figure 10 shows that most of Gwinnett County, including Suwanee, is situated in Plant Hardiness Zone 7b, where the minimum temperatures are expected to be between 5 and 10°F. This is also an area where hot climate grasses, such as centipede, bermuda, and zoysia are typically successful.

Administrative and Legal Issues

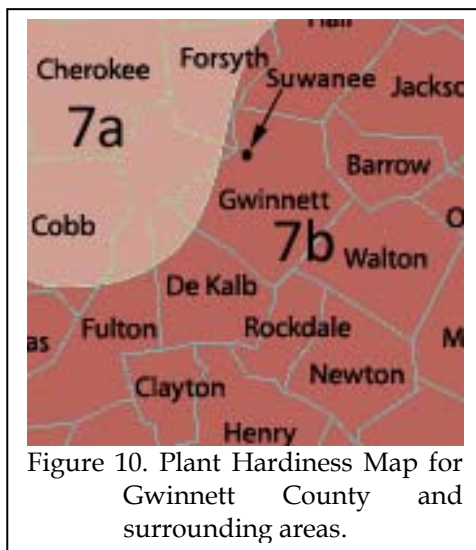

This section is not intended to offer legal advice - only to provide recommendations from the perspective of proactive cemetery preservation.

We are concerned that of the three cemeteries, it appears that the town owns only the Douglass or Sims Lake Park Cemetery. While it is providing care for the other two cemeteries, it does not appear that the city has any rights (or obligations) of ownership.

This will make it difficult - perhaps impossible - for the city to adequately and appropriately care for the properties. It cannot establish rules of conduct, define or prosecute illegal or inappropriate activities, or - most significantly - regulate burial in these properties.

Moreover, there is the philosophical issue of whether the city ought to be spending public resources on caring for what are private resources.

We do not question that it is in the public's interest that the city assume control of these cemeteries - but we very strongly recommend that the city quit claim or take other action to acquire fee simple ownership of these properties. All of our following recommendations are predicated on the city having full and legal authority over the cemeteries.

We also very strongly recommend that the City close all three cemeteries to any future burial, absent an individual providing a legal instrument certifying that they possess pre-existing burial rights. The primary reason for this is that the city exposes itself to considerable liability by operating a cemetery and – as will be mentioned below – the operation of a cemetery requires a substantial series of regulations and a staff familiar with mortuary practices.

In addition, the Jackson Street Cemetery, as will be discussed in a following section, is clearly filled and there does not exist adequate room for additional burials without risking the disturbance of existing graves.

The Suwanee Code of Ordinances includes only one mention of “cemetery.” Section 1-2 includes a cemetery in the city’s definition of a public place (“whether privately or publically owned”). Thus, a number of the city’s ordinances concerning consumption of alcoholic beverages, vulgar behavior, and so forth may reasonably be assumed to apply to the three cemeteries. Nevertheless, there are no specific provisions concerning issues of trespass, damage to the monuments, or theft of cemetery items.

In addition, the city’s ordinance covering parks cannot be applied in a meaningful way to the cemeteries. In fact, many provisions of Chapter 42, Article II are clearly inappropriate for cemeteries. For example, the ordinance specifies that the city’s parks are open from “sunrise to 11p.m.” Cemeteries are traditionally closed at sundown; it has never been appropriate to visit cemeteries at night. On the other hand, Section 42-40 does make it illegal to “dig up, cut, damage or remove” historical artifacts – which may provide some protection to cemeteries in so far as they are legitimately considered historical artifacts.

Nevertheless, the city is poorly situated to provide appropriate protection to the three

cemeteries. For a comprehensive cemetery ordinance enacted by a city of almost identical size, the city should examine the Code of Ordinances for the City of Fitzgerald, Georgia. Fitzgerald operates Evergreen – a city cemetery – and Article III specifically defines burial operations.

If the cemeteries are closed to future burials as we recommend, much of the City of Fitzgerald’s provisions will be unnecessary in so far as they relate to burial practices. However, we do recommend that Suwanee adopt provisions similar to Article III, Section 7-60, desecration of burial sites and Article III, Section 7-61, hours open (as well as an appropriate violation section establishing punishment).

Other provisions of the Fitzgerald Code that Suwanee may wish to consult includes Article I, Section 7-1, which establishes an individual to “exercise a special care over the cemetery and to procure the services of such persons as are necessary to improve, maintain and protect the premises.” The remainder of this article deals with the operation of the cemetery – again unnecessary if Suwanee closes the cemeteries to future burials as recommended. However, the city should consider also adopting a provision similar to Section 7-16, Damaging cemetery property, “No person shall by driving upon, treading upon or otherwise mar the beauty of the ground, graves, growths or other property of the cemetery, nor in any way damage or destroy anything of ornament or of value to the cemetery grounds.”

We also recommend that, in order to preserve the historic integrity of the properties, Suwanee adopt a provision similar to Section 7-17 that would limit the installation of any future markers in the cemetery without prior approval. The issue is that without such a provision, any individual or group could go into the cemetery and erect markers without the approval and consent of the city. Such actions might not only be objectionable, but they could dilute or damage the historic integrity and beauty of the

cemetery. An example would be erecting new markers to replace historic markers. Another example, seen at the Sims Lake Park Cemetery is the erection of a brass marker on the original, historic fabric, damaging the original artifact.

There are other cities with meaningful ordinances, including Cedartown (see especially provisions regarding curfew, penalties for violation, loitering, damage to property, and removal of property) and Perry (see especially Article 5. Offenses Involving City Cemeteries).

Finally, we recommend that the city adopt a flower policy that will minimize maintenance problems.

First, we believe that all flowers or arrangements should be removed by the city 10 days after holidays *or* when the arrangements become unsightly. This will allow staff to remove faded flowers, such as Christmas decorations after the holidays. Floral policies are common at cemeteries and what we propose is actually relatively simple and liberal.

Second, we recommend that only cut or live flowers be allowed. The most significant benefit of this approach is that such flowers can be readily mulched into the landscape, thereby significantly reducing the level of maintenance effort. Natural flowers are also far more appropriate and in-keeping with the historic nature of the cemeteries. In contrast, plastic flowers, if accidentally mowed, create significant debris that will not decompose.

Recommendations

The city should take the steps necessary to acquire fee-simple title to all of the cemeteries. This step is necessary to allow the preservation of the properties.

The city should modify its existing code to include specific provisions protecting the cemetery and making desecration a crime, prohibiting alcoholic beverages or firearms in the cemetery, prohibiting damage to the

cemetery (distinct from desecration), establishing hours of operation, and requiring any modifications to be approved.

The city should close all three cemeteries to future burials, absent an individual producing a title to a specific, and open, plot.

All decisions regarding modifications, alterations, additions, or other actions affecting minimally the historic section of the city's cemeteries should be carefully evaluated against the Secretary of the Interior's Standards for Preservation.

The remaining historic fabric and context of the cemetery should be protected.

HISTORIC SYNOPSIS

This assessment was not tasked with conducting additional research, so this account relies on a variety of primarily secondary sources supplemented by a few primary sources. While these discussions will assist the reader in placing the cemetery in a more secure historic and aerial context, its primary goal is to suggest areas that can be profitably researched in the future. Although the history of the tracts is certainly affected by the September 26, 1871 fire at the Gwinnett County Courthouse and loss of earlier records, there remains much that can be researched.

The County and City

Suwanee, Georgia began about three miles southwest of the current downtown area of Suwanee, where the Suwanee Creek flows into the Chattahoochee River. It was in this

location that Suwanee Old Town – a historic Indian village – thrived into the first decades of the nineteenth century.

Gwinnett was one of three counties created by the Georgia General Assembly in December 1818 (the other two were Hall to the northeast and Walton to the southeast). In 1820 a land lottery was held in Gwinnett, with four lots awarded that would eventually be within the town of Suwanee. In 1838 the Suwanee Post Office was created. It wasn't, however, until the arrival of the Southern Railroad and its depot in 1871 that the village began to flourish. A second small station called Shadow Brook was added on the south side of the tracts at the Lawrenceville-Suwanee Road.

While the railroad created the community, its economic base was cotton. In

1850 Gwinnett produced 2,531 bales of cotton, 436,227 bushels of corn, 102,056 bushels of oats, and 78,307 bushels of sweet potatoes. The county boasted two woolen factories, three flour mills, eight saw mills, and three tanneries. It wasn't, however, until 1875 that the first cotton gin was built in Suwanee. Located on the corner of Jackson and Scales, it would have been less than a half mile east of the Jackson Street Cemetery.

In 1860, only 363 of the 1,647 households (about 22%) owned slaves and 52% of the slave owners held five or fewer African American slaves. Only three held 50 or more enslaved Africans. Farms were generally

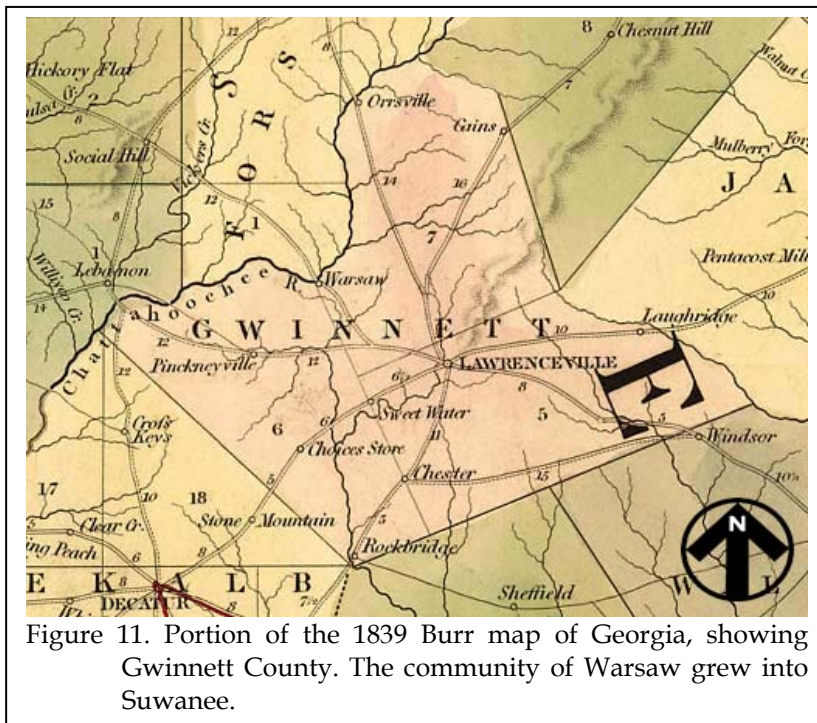

Figure 11. Portion of the 1839 Burr map of Georgia, showing Gwinnett County. The community of Warsaw grew into Suwanee.

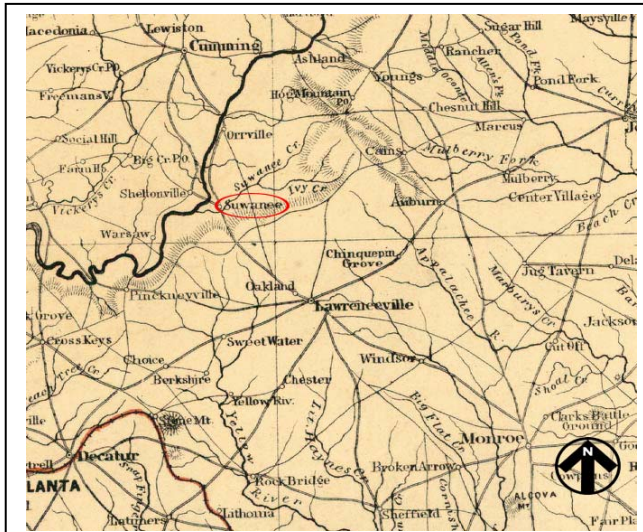

Figure 12. 1865 US Coastal Survey map of Georgia, showing Suwanee prior to the railroads.

small – over nearly four-fifths (78%) of the farms were 100 acres or less.

It shouldn't be surprising, then, that the African American population in Gwinnett has historically been low (see Figure 13).

Figure 13. Growth of the white and black population of Gwinnett County from 1850 through 1950.

By 1880 there were 39 homes and 216 people in the village. In 1881, however, a major fire destroyed all of the town's commercial establishments. By 1923 12 new stores had been built; also present was a cotton gin, a feed mill, two auto repair garages (as well as two

blacksmiths), a coffin factory, a gristmill, a planing mill, and a livery stable. It wasn't until the depression's New Deal projects paved the Buford highway that the community had easy highway access to Atlanta.

The town wasn't incorporated until 1949, when it was about 3.1 square miles. Since then its size has grown to over 10 square miles.

Jackson Street Cemetery

The first legal record of this cemetery appears to be the December 18, 1919 deed from J. H. Scales of Taylor, Florida to "The Colored People of Suwanee, Georgia & Community" when 0.86 acre was deeded for \$90. The meets and bounds ran from "the Southern Railroad right of way corner of Moses Freeman lot . . . northerly 150 feet, thence westerly to rock corner 250 feet to Wiley Shanley lot, then southerly 150 feet to Southern Railroad right of way. Thence easterly 233 feet along So. R.R. right of way to beginning point." The deed specifies that this was part of "land lot no. 237."

Although the cemetery dedication did not take place until 1919, this does not preclude the property from being used for burials prior to that date. It is not unheard of for graveyards to begin on farm property and for the property to later be deeded by the owner to some group – disposing of property that, because of its existing use, could not otherwise be used or sold.

Nevertheless, there is no indication who the "Colored People of Suwanee" might be, although the original deed was apparently held by Juanita Meriday. Although we have found no Meriday in the federal census through 1930, similar names Merida and Merriday are present. A Jack Merida is found in all three census as a small farmer in the Suwanee area.

HISTORIC SYNOPSIS

STATE OF GEORGIA, Gwinnett County.

THIS INDENTURE, Made the 18th day of December in the year of our Lord One Thousand Nine Hundred and Twentieth, between J. H. Seales of the County of Taylor, Fla. of the one part, and The Colored People of Suwannee Co. & Community of the County of Gwinnett Ga of the other part, WITNESSETH: That the said J. H. Seales for and in consideration of the sum of Twenty 00/100 DOLLARS, in hand paid at or before the sealing and delivery of these presents, the receipt whereof is hereby acknowledged, has granted, bargained, sold, aliened, conveyed and confirmed, and by these presents does grant, bargain, sell, alien, convey and confirm, unto the said Colored People of Suwannee & Community heirs and assigns, all of a certain tract or parcel of land lying and being in the town of Suwannee, Gwinnett County, Georgia in the 7th land district of said county bounded as follows:
beginning at a point on the Southern Railroad right of way corner of Moses Foreman lot and running along Moses Foreman line northwesterly 150 feet, thence westerly to rock corner 250 feet to Wiley Shapley lot, thence southerly 150 feet to Southern Railroad right of way, thence easterly 233^{feet} along S.O.R.R. right of way to beginning point.
Being part of land lot no. 237.
Containing 8600 of an acre

TO HAVE AND TO HOLD the said bargained premises, with all and singular the rights, members and appurtenances thereto appertaining, to the only proper use, benefit and behoof of the said party of the second part, their heirs, executors, administrators and assigns, in fee simple. And the said party of the first part the said bargained premises unto the said party of the second part, their heirs, executors, administrators and assigns, and against the said party of the first part, his heirs, executors and administrators, and against all and every other person or persons, shall and will warrant and forever defend, by virtue of these presents.

IN WITNESS WHEREOF, The said party of the first part has hereunto set his hand and affixed his seal, and delivered these presents, the day and year first above written.

Signed, Sealed and Delivered in the Presence of
Gustavson (SEAL.)
Blair (SEAL.)
_____ (SEAL.)

Recorded 11/3/22 191 Clerk.

Figure 14. Copy of the original deed for the Jackson Street Cemetery. The recorded copy is found at Gwinnett County Register of Deeds, DB 32, pg. 549.

Figure 15. Jackson Street Cemetery in 1938 (left) and 1960 (right).

The only African Americans in the 1920 census (Goodwin, District 66, Suwanee) who owned their own land were Moses Freeman, Leon Keith, Henry Orr, Margrette Harvey, and Harriett Brandon. With the exception of Freeman, all were elderly at the time of the census.

Scales, on the other hand, is far better known, being a very large farmer in the Suwanee area before retiring to Florida and placing his farm up for sale. A plat of this farm shows a large tract running from just north of Suwanee westward on the north side of the Southern Railroad (Gwinnett County Register of Deeds, PB A, pg. 302-303). The Scales' land at one time appears to have extended to the Chattahoochee River. Scales' father, Dr. S.A. Scales, also held a large tract that his son sold in 1883 (Gwinnett County Register of Deeds, DB S, pg. 179).

Although we have been unable to find Wiley Shanley in the land records, the Moses Freeman lot was sold by "Elizabeth Freeman, Col." In February 1909 to "Moses Freeman, Jr., Col." for "one dollar and the natural love and affection," suggesting that she was likely his mother (Gwinnett County Register of Deeds, DB 20, pg. 181). Since there is no record of Elizabeth

acquiring the land, it is likely that it was passed to her by her husband, Moses Foreman, Sr. Moses Freeman shows up in the 1870 census as a 50 year old African American blacksmith with a \$140 in real estate. Besides his wife Elizabeth, there were five children – Moses, Jr. had not yet been born.

We know that the property passed from Moses Freeman, Jr. (who died in 1946) to his wife, Viola Smith Freeman (who died in 1964) to their four children, Moses B., Lucille, Ophelia, and Aurelia (Gwinnett County Register of Deeds, DB 1487, pg.105).

The only other mention of the cemetery in the land records is the 2005 Notice of Order and Judgment that involved the adjacent railroad right of way (Gwinnett County Register of Deeds, DB 42675, pg. 210). It seems unlikely that deeds were ever prepared for any of the plots in the cemetery and there is no indication of a cemetery map.

Figure 15 compares the cemetery area as shown in a 1938 and 1960 aerial images. The earlier photograph shows the cemetery entirely open – almost clear cut, while the surrounding property, such as that of Moses Freeman to the

Figure 16. Shadowbrook Cemetery in 1938 (left) and 1966 (right).

east, were in cultivation. By 1960 cultivation had been abandoned and the cemetery, while still open, shows evidence of beginning to grow up. A 1977 plat of the Freeman property (Gwinnett County Register of Deeds, PB 8, pg. 83) shows the cemetery boundary, including the gully leading into the Southern Railroad right of way.

An Eagle Scout project was conducted in the cemetery in 2006. The records generated, while incomplete, provide an excellent basis for comparison of change only two years later.

Additional research could focus on those buried in the cemetery. It should be possible to develop a better understanding of the African American community that was using the cemetery during the early twentieth century. It would be of special interest to identify who in the community arranged for the purchase of the property and who maintained the deed prior to Juanita Meriday.

Shadowbrook Cemetery

An undated and unsourced document entitled, "Shadow-Brook Cemetery," asserts that the property for this cemetery was "donated by

the Born family." Presumably this was Daniel M. Born, who was buried in the cemetery in 1891; however, we have been unable to find any Born who donated property to the community or town or property that was dedicated to cemetery purposes. There are two graves dating from 1877 – Ella V. Harris (daughter of A.G. Harris) and James Brown. A search for both found them holding property in Suwanee, but there is no indication that they granted any land for a cemetery.

This research did, however, discover a January 6, 1922 deed in which the Town of Suwanee sold Mrs. S.J. Brown "that tract or parcel of land lying and being in Cemetery belonging to Town of Suwanee, lots numbered 1 and 2, 15 and 16 of said Cemetery, bounded as follows: On the West side by M.E. Church lot, On the South side by land of John B. Brogdon, on East side by lots #24 and 14, and on the North side by lots #17 and 18. Each lot measuring twenty by twenty four feet. These lots being part of lot #236 bought of E. Stonecypher by town of Suwanee the 5th Day of November, Nineteen Hundred and Nineteen" (Gwinnett County Register of Deeds, DB 36, pg. 370). The original sale was identified in

Gwinnett County Register of Deeds, DB 33, pg. 344. The sale, taking place in 1919, does not reference the tract as a cemetery.

There are two aerial photographs of this cemetery as well (Figure 16). Both show the cemetery prior to any of the modern developments of Suwanee, although the 1938 image reveals far more cultivation, as well as what may be a field road traveling from northwest to southeast at the same angle as the property line marking the cemetery today. Little vegetation is visible in the cemetery and plots are only vaguely indicated. The 1966 image shows some disturbance to the southwest of the cemetery, although other than the decline in adjacent cultivation little else is different.

There are three lists of burials in the cemetery. One is dated August 6, 1936; the other is undated but “copied by Ann Lynn Link 1978.” The third is found online at www.oldplaces.org/gwinnettga/cedeteries/suwaneeecem.html. That document, accompanied by two ca. 1999 photographs, was apparently created by Toni McCall from onsite transcriptions. None of these documents, however, offer complete transcriptions.

Much additional research will be necessary to determine the origin of this cemetery and its relationship to the identified records of a town cemetery. This should be a primary goal of additional research. Additionally, it would be useful to examine who was buried in the cemetery, as opposed to those who sought burial elsewhere. While there are significant members of the Suwanee community present in the cemetery, others are clearly absent.

Sims Lake Park Cemetery

This property has been historically called the Douglass Cemetery, although the origin of this historical name is uncertain. A chain of title for the tract has been briefly examined from its most recent owner, the

Norman Rae Hewell Revocable Trust (Gwinnett County Register of Deeds, DB 16592, pg. 254) back to its 1871 owners, Brogdon & Strickland (Gwinnett County Register of Deeds, DB 11, pg. 367). During the various transfers we found no mention of the cemetery – suggesting that by the late nineteenth century there was no longer any strong tie to any of those buried on the parcel. The two plats identified (Gwinnett County Register of Deeds, PB A, pg. 116 and PB 12, pg. 37, see Figure 17) fail to show the graveyard.

The cemetery appears to be named for Jonas Douglass, who is found in the 1830 census for Gwinnett. His family consisted of six males and five females. It is impossible to meaningfully trace the family using the census records, but as late as 1860 the family was still in Gwinnett County. Rebecca Dugless [sic], the widow of Jonas, was 87 and living with her 32 year old daughter, Lucrecia (spelled Lucretia in the 1850 census). Nearby was her 47 year old son, Jones T. Dugless with his wife and eight children.

Other family names in the cemetery include King and Wisdom. John King appears in the 1850 census, living in Sugar Hill – the same area as Rebecca Douglass. He was a relatively well-to-do farmer, listing \$2,000 in real estate. His family included his wife, Keziah, and 11 children, including the four year old William.

John L. Wisdom is first found in the 1850 census of nearby Goodwins. He is listed as an “inmate” in the family of James Brown. He was 22 years old and a farmer. By 1860 he was in District 55, still a farmer (but no longer an inmate) and married to Jane. He was also accumulating some wealth, listing his real estate at \$1,500 and his personal estate as \$600.

Although we can document these individuals as living in the general vicinity, this research has not been sufficiently detailed to determine any family connections. Unfortunately, with the early land records

Figure 17. 1979 plat of the Sims Lake Park property (Gwinnett County Register of Deeds, PB 12, pg. 37).

destroyed, it will be very difficult to determine if they owned the land on which the cemetery is located, although this seems unlikely given the different enumeration districts identified. Family, religious, or neighborly connections seem more likely and both families are reported to have been members of the Level Creek Methodist Episcopal Church, along with the Douglass family (www.lcumc.net/history.html).

Recommendations

Of the three graveyards, a complete title is available only for the Jackson Street Cemetery; additional research at both the Sims Lake Park and Shadowbrook properties may provide important information on the origin of the graveyards. This is of special interest at the Shadowbrook Cemetery since this graveyard was apparently used by a number of Suwanee's early families.

Additional research at the Jackson Street Cemetery should examine the African American community of Suwanee, attempting to better understand who the cemetery was deeded to, as well as who was using the property.

Further research into those buried in the Sims Lake Cemetery may help better connect those buried there, linking the families.

All of the historic research can be used to generate better interpretative information for the city's web site, tourist brochures, and even the city's newsletter.

ROADS AND PEDESTRIAN ISSUES

Access and Circulation

Jackson Street Cemetery

This cemetery is today almost hidden, being situated at the edge of the Old Suwanee development. Access is by way of a series of two lane roads from either Buford Highway or Main Street. Although quiet for most of the day, during commuting hours there is considerable traffic. There is no signage directing visitors to the cemetery, nor is there signage upon reaching the cemetery.

Figure 18. Gravel drive off Jackson Street and the plastic fence separating this drive from the cemetery beyond.

Historically it appears that Jackson Street (or Cemetery Street) came to a dead end at the cemetery and parking was likely limited to along the road. Today there is a graveled one-lane drive to the cemetery, screened from the roadway by recent limited landscaping. This allows for, at most, two vehicles to park with care. Leaving the cemetery requires that drivers

back down the sloped entrance. This makes entrance back onto Jackson Street difficult and, at times, dangerous. There is no vehicular access into the cemetery, which is separated from the gravel access by a modern plastic picket fence.

Although these conditions may be adequate for the very limited visitation seen by the cemetery currently, they certainly are a limiting factor in any efforts to expand use of the cemetery.

There are, however, several options.

One is to remove some of the recent landscaping (which could profitably be entirely reworked) and create a circular drive, allowing visitors to enter and exit the cemetery more safely. This, however, would not improve the limited parking. A second option, while requiring more expense, would create more parking at the cemetery. By removing the landscaping and grading the area, it would be possible to create head-in parking. This would, however, likely necessitate the creation of a retaining wall between the parking

area and the cemetery, with steps or a ramped area leading up to the cemetery.

At the present time it is likely that the first option is adequate since we see no dramatic increase in visitation in the near future. The second approach, however, does have the benefit of taking a longer view and permitting

the cemetery to be integrated into historical tours and events.

Shadowbrook Cemetery

This cemetery is situated at the northwest corner of Buford Highway and Suwanee Dam Road. This is a major lighted intersection with commercial activities on two corners, a park on the third, and government buildings and the cemetery on the fourth. Suwanee Dam Road between Buford Highway and Peachtree Industrial Road has estimated daily traffic of nearly 31,000 vehicles. Buford Highway between McGinnis Ferry Road and the Lawrenceville-Suwanee Road has over 13,000 vehicles daily. This traffic affects the ease of accessing the cemetery.

Figure 19. Access to the Shadowbrook Cemetery.

The cemetery can be accessed from Buford Highway by turning into the government complex or by turning off Suwanee Dam Road onto a two-lane access road that enters the government building parking from the rear. Parking is then usually available in the

Municipal Court Building parking lot. From this parking lot, however, there is no convenient access to the cemetery except by climbing a steep (and eroding) embankment. Alternatively, individuals may pull off to the side of the road adjacent to the cemetery. This provides easier access.

However, there is no signage to the cemetery, which can be overlooked depending on traffic conditions. Nor is there signage once visitors are at the cemetery.

Sims Lake Park Cemetery

This property is about 1.5 miles from the Shadowbrook Cemetery, off Suwanee Dam Road. The new park is well marked, access is assisted by a traffic signal, and parking is plentiful. However, once at the park, there is no easy or convenient access to the cemetery – and there is no vehicular access.

The city has been reluctant to publicize this cemetery, given its seclusion and the limitations of their staff to protect the property. Nevertheless, it is likely only a matter of time before the cemetery becomes better known (since this study the cemetery has been fenced).

Pedestrian Access, Sidewalks and Pathways

Jackson Street Cemetery

There is no convenient pedestrian access to this cemetery. There are no sidewalks on Jackson Street. Once at the cemetery, there are no defined pathways through the graveyard. Many graves are not marked and many marked and unmarked graves have sunk, causing undulations in the

topography which can be hazardous to site visitors. The cemetery slopes to the south (toward the railroad) and this can pose problems for individuals with limited mobility. A portion of the cemetery is in woods and the associated vines, limbs, and underbrush may be particularly hazardous for many visitors.

There seems little need to improve pedestrian access to the cemetery at this time, since we see little indication of walking tours or a large pedestrian population in this area. African American cemeteries did not historically have defined pathways and it would be inappropriate to place pathways through the graves.

It would, however, be appropriate to fill in the sunken graves now that the cemetery has been mapped. This issue will be discussed in greater detail in a following section. Once accomplished, this will improve overall pedestrian safety – but the cemetery will still have an undulating topography since this is a characteristic of these African American graveyards. No effort should be made to grade or otherwise dramatically alter this topography.

Shadowbrook Cemetery

There is a sidewalk along Buford Highway, although it extends only in front of the government buildings, for a length of about 800 feet. It also does not provide any easy access to the cemetery except at the corner of Buford Highway and Suwanee Dam Road. Nevertheless, we did not see any significant pedestrian traffic, so this is probably not a significant issue.

As mentioned earlier, of greater concern is that there is no convenient access from the Municipal Court parking lot to the cemetery.

Pedestrian traffic from this parking area to the cemetery will cause damage to the already eroding slope, as well as expose pedestrians to difficult and hazardous terrain.

Once in the cemetery there are no paths, but this is typical of this sort of town cemetery. Most of the graves are well defined by plots with curbing, so there are relatively well defined pathways for visitors.

Sims Lake Park Cemetery

As previously mentioned, there is no convenient means to access this cemetery – there are no paths created to the cemetery and the cemetery is not marked.

While we understand the reasoning, the cemetery does exhibit some unique and interesting grave monuments. With further research there may be additional stories to tell at

Figure 20. Recently hydromulched slope from the parking into Shadowbrook Cemetery.

this cemetery and some consideration should be given to long-term access. In addition, it will be necessary to provide some means for caregivers to access the cemetery with equipment.

One option is to create a pathway suitable for the use of either all terrain vehicles (if the city uses such equipment) or pickup trucks that can be gated to discourage

pedestrians. Using a design that precludes visibility from the gate, it seems unlikely that many visitors would use the path. However, its existence would provide necessary access, allowing not only maintenance, but easier periodic inspections and oversight.

Once at the cemetery no further pathways should be necessary – they would not have existed historically and there is no need to include them today.

Universal Access

The lack of suitable pathways and steep slopes are the most limiting factors for ADA compliance or universal access at the three cemeteries. Any extensive modifications would be out of character. In addition, it seems appropriate to make such modifications only if there is a clearly documented need. We are not certain that there is a demand adequate to justify either the expense or the damage to the historic fabric.

In addition, the ADA or the Rehabilitation Act of 1973 is generally not interpreted to apply to cemeteries by the Department of Justice. Nevertheless, we are an aging population and it would be appropriate for the city to establish a protocol that would allow staff to assist wheelchair patrons or other disabled reach specific gravesites in the three cemeteries. Some cemeteries have achieved this goal by training their staff in the correct means of assisting the disabled¹ and by providing golf carts to help ferry individuals to grave locations. This should be a long-term goal of the city for three properties.

Recommendations

The city should make changes at Jackson Street cemetery to allow easier vehicle exit from the parking area. This may include creating a circular drive or a more elaborate grading project to create head-in parking.

Sunken graves at the Jackson Street Cemetery should be filled (see description in a following section on landscape issues), but there should be no grading or other landscape alteration.

None of the cemeteries warrant the creation of pathways. They did not exist historically and their creation today would cause extensive damage to the historic fabric and context of the properties.

The city should create a pathway for maintenance vehicles to the Sims Lake Park Cemetery. This is a critical feature for the long-term maintenance and preservation of the cemetery.

The city should establish a protocol for assisting disabled clients and visitors. This should include appropriate training of staff and a means to provide access to remote graves.

¹ Sites for establishing such protocols include <http://www.apparelyzed.com/etiquette.html>, <http://www.afb.org/Section.asp?SectionID=36&TopicID=163&DocumentID=2104>, and <http://www.aheadweb.org/wiki/DeafEtiquette>.

LIGHTING AND SECURITY ISSUES

Vandalism

Jackson Street Cemetery

Although the city reports that vandalism has occurred in this cemetery, we did not identify any damage that could obviously be identified as intentional and malicious. We did identify considerable loss since the 2006 Eagle Scout project, but this appears to be primarily natural or related to careless landscape practices. Most of these losses are of ephemeral markers.

The cemetery is not fenced and there are no street lights in the immediate area. The topography of the cemetery also makes it difficult to see if individuals are in the cemetery without driving up into the parking area.

Shadowbrook

Here, too, we were told that vandalism has occurred in the past. We did identify several stones that had been toppled. This may represent vandalism or may be the result of aggressive landscape maintenance. There does not, however, appear to be any very recent damage.

Although the cemetery is situated on a major street corner, we observed no pedestrian traffic cutting through the property. In addition, the location among the city buildings provides some oversight during weekdays.

Sims Lake Park Cemetery

The damage observed in this cemetery appears to be related to either natural deterioration or, in a few cases, old examples of ledgers being moved to examine the contents of box tombs.

Of the three cemeteries, this one is certainly the most isolated and susceptible to vandalism. Access is difficult and, at present, there is no systematic inspection process. However, the cemetery's location also provides some protection since it is not accessible by vehicle.

Exposure Potential

Suwanee has a relative low property crime rate -- 3483.0 incidents (most larceny theft) per 100,000 people using the FBI Uniform Crime Rate database for 2004. This compares with an average rate of 6543.0 in Georgia and an average rate of 4296 incidents per 100,000 nationally. Nevertheless, in 2006 (the most recent statistics we could identify) Suwanee had 2.02 police officers per 1,000 residents, compared to a U.S. city average of 3 officers per 1,000 residents.

It will be difficult to ascertain the level of damage the cemeteries suffer without some method of periodic inspection. None of the cemeteries receive consistent public visitation, so it will be important for the city to develop inspection procedures.

This inspection process can be integrated with other maintenance activities, such as trash collection, collection of downed limbs, or other such activities. The inspections should occur weekly and should be documented. The individual doing the inspection should be familiar with the cemetery and thus able to recognize damage that is not pre-existing.

This study has conducted a stone-by-stone photographic inventory of all three cemeteries and this provides an excellent database to identify future damage and losses.

Caregivers should become familiar with this inventory.

We recommend that the city develop a form designed for the reporting of cemetery-specific vandalism. This form should include several items:

- What was damaged, with specific information concerning each stone, including the name and lot/plot?
- How was the stone damaged (toppled, broken into how many fragments, scratched, etc.)?
- Where is the stone now (was the broken stone gathered up for storage, if so, where is it stored)?
- An estimate of when the damage occurred. This should routinely include

the last time the stone was known to be undamaged.

- An estimate – from a conservator – of the extent of the damage and cost for repair.
- A photograph of the damaged stone.
- When police were notified.
- When police responded and took a report.
- The outcome of the police investigation.

It is critical that the city report each and every case of vandalism, regardless of extent, to the police. The police must be educated concerning the historical value of these stones and the financial cost of the damage to ensure that damage and vandalism is taken seriously. If the damage is recent, the police should be expected to assign crime scene investigators to collect evidence. This evidence may include shoe prints in soil or on stones, discarded beverage containers with finger prints, collection of evidence such as cigarettes, and collection of any eye witness accounts. The police should be expected to assign an investigator and this individual should be expected to treat this as a real crime deserving of real investigatory efforts.

These inspections, however, are not intended to take the place of routine police patrols. A police presence can be a major deterrent to cemetery-related crimes.

Such patrols can be easily accomplished at Shadowbrook and Jackson Street, where the cemeteries are accessible. For example, police can cut through the city parking lot to drive past the Shadowbrook Cemetery. The Jackson Street cemetery is more difficult to access, but this issue would be significantly reduced if our recommendation to create either a circular drive or head-in parking is enacted. Either approach

would provide the police with easier access to the cemetery.

Patrols are especially important at night – and especially on long weekends and holidays when alcohol consumption increases. Halloween is a particularly common time for cemetery vandalism.

Obviously patrols are not possible at Sims Lake Park Cemetery, so here it is especially important that staff make weekly checks on the cemetery and its condition. The fencing of this cemetery may also be of some use in reducing the vandalism threat.

It is also useful to enlist neighborhood assistance where possible. Of the three cemeteries this is an option at only the Jackson Street property, but here we recommend that the neighbors across the street be contacted by the city with the specific request to notify the police should anything suspicious be seen in the cemetery. Although many neighbors likely work during the day, they can provide valuable allies during nights and weekends.

Cemetery Lighting

Lighting is sometimes seen as reducing vandalism. There are two problems with this approach. The first is that cemeteries were not lighted historically. Thus, the introduction of lighting detracts from the historical integrity of the properties, changing the historic fabric. The second problem is that lighting is only useful if there is someone guarding the property, using the lighting to identify problems. This is not the case in most cemeteries, including those in Suwanee. In fact, only the Jackson Street Cemetery has residential neighbors in close proximity that can assist in keeping an eye on the property.

Hardening Targets

Thefts in cemeteries nationwide have dramatically increased. The reasons for this are

two-fold. First, there is an increasing market for gates, urns, ironwork, and statuary – created by an increase in upscale garden design and individuals willing to pay large sums for original artwork. Second, there is less attention being paid to cemetery fixtures, largely the result of decreased maintenance budgets and fewer police patrols.

There is only one iron fence and gate in Shadowbrook, but the gate is susceptible to theft since it was not secured at the time of the survey (it has since the field study been secured by the City). It is a simple maintenance step to use woven stainless steel wire to secure the gate to its hinge post. This allows the gate to open and close, but makes it considerably more difficult to lift the gate off its hinges and steal it. The cost is less than \$20 and the time involved is about 15 minutes. This is something that the city's maintenance staff can easily accomplish. See the NPS article, <http://crm.cr.nps.gov/archive/25-02/25-2-15.pdf> for additional information.

Fragmentary stones will be discussed in greater detail in a following section, but it is important that damage be repaired to prevent loose items from being readily available to thieves.

Recommendations

Arrangements should be made to allow the Sims Lake Park Cemetery to be inspected at least weekly. The remaining two cemeteries should be inspected on a routine basis as maintenance is conducted.

The city should develop a policy and form for identifying, reporting, and responding to damage, vandalism, and theft at the three cemeteries.

The city should work to ensure that there are routine police patrols past Shadowbrook and Jackson Street cemeteries.

The neighbors across from the Jackson Street Cemetery should be contacted with the request

to report any activities at the cemetery to the police.

The one plot gate in Shadowbrook cemetery should be secured using woven stainless steel wire, attaching the gate to its hinge post.

Maintenance should be improved to prevent items from being easily picked up and removed from the cemeteries.

Given the isolated location of the Sims Lake Park Cemetery, public access should be restricted to outside the fenced area.

CEMETERY FIXTURES AND FURNISHINGS

Sims Lake Park and Jackson Street Cemeteries

There are no fixtures or furnishings at the Sims Lake Park Cemetery. At the Jackson Street Cemetery the only such items – the picket fence at the cemetery entrance and a bench under a pine tree – are both modern.

Shadowbrook Cemetery

The only item at the Shadowbrook Cemetery is a fenced plot. This fence is intact and a significant element worthy of careful protection at the cemetery.

The fence is a simple iron picket with decorative finials. The pickets are ½-inch and are set in three rails at a 45° angle. The pickets alternate in height and are set on ¾ inch centers. The corner and gate posts are an open decorative style. Fences of this style were common in the late nineteenth and early twentieth centuries.

The fence reveals a range of maintenance issues, the most immediately critical being the unsecured gate. This gate could be easily remounted by drilling out the corroded ferrous screws and using instead stainless steel bolts. The gate should then be secured using woven stainless steel cable as previously described.

There are other problems including unsecured line post supports, missing or damaged slip joints connecting fence sections, and damaged corner post connectors. It is very important that attempts at repair avoid welding what were originally slip joints. These fences were meant to expand and contract using slip joints. This ability to move is defeated by welding, resulting in additional damage to the fence.

While these issues require repair for the long-term stability of this fence, our primary recommendation (after securing the gate) is that the fence be painted – this will improve its appearance and will reduce future conservation problems.

Absent historic documentation that suggests otherwise, flat or semi-gloss black is typically an appropriate fence color. Gloss paint should be avoided since the glossing agents reduce the lifespan of the coating.

The best approach to historic ironwork is minimal wire brushing to release obvious scale and corrosion, then the use of a rust converter as a primer. Of the three that were successfully tested by the Canadian Conservation Institute, Rust-Oleum's Rust Reformer is the least expensive and most readily available (it is available, for example, from Grainger's Industrial Supply for about \$80/gallon). We recommend one coat of the Rust Reformer. This can be applied over stable corrosion and the product does an excellent job of converting the corrosion into a stable base for a top coat of alkyd paint. We recommend a first coat of flat white. The Rust Reformer will show through this white paint, indicating any area where the white paint was incompletely applied. Next should be the top coat of flat black. The white undercoat will immediately reveal any area where the black top coat has failed to provide adequate coverage. The use of these alternating colors helps ensure thorough coverage. The paint coatings should not be applied thickly, as thick coats hide detail, cure poorly, and will often prematurely fail.

Generally painting should be by brush – if sprayers are used all nearby monuments must

Figure 22. Iron fence at Shadowbrook Cemetery. Top photo shows the plot and fence. Middle row from left to right: gate post showing brass hinges, damaged corner post connector, missing slip joint connector. At the bottom is an example of a damaged line post.

be carefully wrapped in tarps to prevent overspray.

This maintenance program will significantly improve the appearance of the ironwork and will help prevent additional corrosion and deterioration of the various fence components.

Recommendations

The city should immediately implement - or fund - a maintenance program for the iron work in the cemetery that consists - minimally - of securing the gate and painting. Long-range, the city should fund a conservation program for the fence.

LANDSCAPE MAINTENANCE

Turfgrass

Turfgrass should be an important concern of cemeteries, although rarely is it given adequate attention. With an appropriate turfgrass, mowing frequency is reduced. This reduces labor costs, pollution, equipment expenditures, and perhaps most importantly to

historic properties, damage to the stones.

Turfgrass was found in the Jackson Street and Shadowbrook cemeteries. The Sims Lake Park Cemetery is in dense woods and there is no turf present.

Where turf is present it consists primarily of centipede, although in many areas the stands are thin and largely taken over by “weeds.”

Centipedegrass (*Eremochloa ophiuroides*) is a moderately coarse-textured species that forms a relatively dense turf when properly cared for. It has poor cold tolerance and is close to the edge of its range in Suwanee. Centipede has a relatively shallow root system and is therefore less drought tolerant than bermudagrass. Centipede is best known for its minimum maintenance requirement, requiring less mowing and fertilization than most other warm-season grasses used for turf areas.

Grass is very thin in Shadowbrook and there are broad areas of exposed soil. In these areas there appears to be little or no humic soil, with clay and rocks exposed on the surface. The city is having special difficulty establishing grass on the side slopes of the cemetery. Hydromulching has been used, but the very sparse rainfall has reduced the effectiveness of that process.

Although the stands are better at the Jackson Street Cemetery, much of the cemetery is dominated by broad leaf “weeds” – undesirable species that cause the grounds to look unkempt and require

Figure 23. Turf problems. Above, thin grass and erosional area at Shadowbrook. Below, thick stand of weeds at Jackson Street Cemetery (photo from 2006 Eagle Scout Project).

frequent mowing to keep them in check.

Mowing

Mowing at Jackson Street and Shadowbrook is conducted by Public Works staff using equipment that is readily available.

At Jackson Street the cemetery topography and number of markers demand that only walk-behind mowers with decks no larger than 21-inches be used. The equipment should have mulching blades. Not only do collection bags cause damage to stones and make maneuvering the equipment more difficult, but the clippings when left on the ground will provide nutrients. The use of larger equipment should never be allowed in this cemetery.

At Shadowbrook there are some areas – primarily the perimeter areas – where larger riding mowers can be used. However, even here the smaller mowers will be needed in most areas because the monuments, coping, and slopes present significant obstacles.

Mowing during the growing season at many cemeteries is conducted every 2 weeks. While mowing less frequently may have some appeal, the removal of grass adjacent to monuments would become more difficult with longer and thicker grass blades – and this in turn could lead to more damage to the stones.

Frequency, however, can best be judged by grass growth. The mowing height for centipedegrass is 1-2 inches. As a general rule, a grass should be mowed often enough so that you never remove more than $\frac{1}{4}$ to $\frac{1}{3}$ of the plant material. Removing too much plant material can shock the grass, especially when it is under heat or water stress. Using a height of 2 inches, the grass should be cut when it reaches 3 inches.

Mowing frequency should be based entirely on the growth rate of the grass. In

spring and fall when grass is growing more vigorously, mowing should be more frequent than during mid-summer when growth rates slow. During a drought, mowing will be required far less frequently than during periods of abundant rain. Thus, mowing frequency is variable, depending on conditions.

It is also important to prevent scalping the grass – a problem that we noticed in a few areas of Jackson Street Cemetery, probably because of the undulating topography. Scalping causes severe visual damage. More importantly, scalping shocks the grass plants and growth slows or stops, limiting the vigor of the turf. A scalped lawn may dry out quickly from drought, or may develop unusual weed and disease problems.

In addition to mowing, nylon trimmers are used around monuments, coping, fencing, and plantings. This is an acceptable practice, but it is critical that a very light weight line be used – along with worker attention – to minimize damage to soft stone such as marble.

We are told that the typical line used by the city is 0.095 inch. Heavy lines such as these tend to tear the grass, rather than cut cleanly. They are also inappropriate in a historic cemetery because of the damage they do to fragile stones. It is critical that the city use only 0.065 inch line in the cemeteries.

Nevertheless, we found relatively little indication of either mower or trimmer damage in either Jackson Street or Shadowbrook. This is excellent and suggests that the staff are taking care to avoid damage to the stones.

All mowers in the cemeteries should have a closed cell foam pad attached to the sides and front edges. This bumper will help to minimize accidental damage.

Table 2.
Maintenance Schedule for Centipedegrass

	Jan	Feb	Mar	April	May	June	July	Aug	Sept	Oct	Nov	Dec
Mowing			Mow at 1" at greenup						Raise to 2" before frost			
Fertilization				Test for pH, nitrogen, and potassium								
Pest Control				White grubs are largest threat, treat as necessary								
Weeds		Preemergence		Post-emergence, avoid stressing lawn								
Renovation				Sod								
Irrigation				Irrigate to prevent drought stress								

Fertilization and Weed Control

The cemetery staff does not routinely conduct soil tests and no fertilization is applied. Low fertility can lead to a variety of problems, including thinning of grass allowing invasion of weeds. We recommend that the soils in the two cemeteries be tested at least every three to five years.

Soil testing can be conducted by the Soil, Plant and Water Analysis Laboratory, University of Georgia, College of Agricultural and Environmental Sciences, 2400 College Station Rd., Athens, GA 30602 (706-542-535). The cost per sample is \$4 and a brochure providing guidance on sampling is available at <http://pubs.caes.uga.edu/caespubs/pubs/PDF/C896.pdf>.

Centipede requires relatively little fertilization, but soil tests will determine the acidity of the soil (which may need adjustment to about 6.5) and allow an evaluation of the need for nitrogen and potassium (centipede does not generally receive phosphorus fertilizer). The addition of potash in September through November may enhance winter hardiness.

In a cemetery setting, organic fertilizers should be the primary choice. These materials, such as cottonseed meal and bone meal, have much lower salt indices than inorganic fertilizers – resulting in reduced salt uptake by monuments. This is important since salts cause staining, spalling, and deterioration of marbles, sandstones, brick, and even granites. In

addition, organic fertilizers have a slower release rate and are easy on the root systems.

There has been no reason to treat the lawns at Jackson Street or Shadowbrook for weeds (since the grass is primarily weedy growth). There is also a legitimate concern over damaging stones. Many herbicides contain salts and these can migrate into stones (especially sandstones and marbles), causing discoloration, spalling, and other damage.

Nevertheless, the current lawns do exhibit a very heavy infestation of weeds and preemergent and postemergent treatments may be appropriate if the city wishes to improve the overall appearance of the cemeteries. Good lawn management, which includes proper fertilization, mowing, and watering, will produce a healthy dense turf that is difficult for weeds to invade.

One approach, of course, is to avoid broadcast herbicides and, instead, use a coarse spray to treat limited areas. Using this approach it would be possible to treat for many annual weeds and over several years dramatically improve the appearance of the cemeteries. Care must be taken to avoid spraying the monuments, so we realize the applications will not be complete or perfect, but over several years the prevalence of these weeds will decline. Postemergent weeds may be controlled in the same manner.

Unfortunately, the lawns at Jackson Street and Shadowbrook have not been well tended and considerable renovation is required.

Figure 24. Fire ants at the Jackson Street cemetery (above) and Shadowbrook (below).

Renovation

We recommend that the cemetery implement a renovation program at the Shadowbrook and Jackson Street cemeteries in order to establish a good stand of a single grass type. A warm season grass is probably a good choice. Since there is already a stand of centipede, it may be appropriate to select this species.

We understand that such an effort will need to be phased and it may make sense to begin the effort on a section by section basis. The *Lawns in Georgia* (<http://pubs.caes.uga.edu/caespubs/pubs/PD>

[F/b773.pdf](#)) provides information on renovation of existing turfgrass areas.

Any renovation effort would, however, require at least temporary water until the sod becomes established. This could be achieved through the use of temporary above ground piping (we do not recommend efforts to establish irrigation systems in cemeteries).

There are no significant shade areas in the Shadowbrook Cemetery, although there are shady areas at the Jackson Street Cemetery. Virtually all grasses fail to perform effectively in heavy shade. Our best advice, especially for areas under trees, is to remove the sod (which rarely does well in such circumstances) and replace it with 2-3 inches of mulch. This will also promote better tree health and reduce areas subject to lawn maintenance.

Pest Control Practices

The city rarely undertakes pest control practices. An issue of considerable concern is the presence of fire ants. One survey done in 1998 concluded that 33,000 people in the state of South Carolina sought medical attention as a result of fire ant stings. Of those 15% had severe localized allergic reactions and 2% had severe systemic reactions resulting in anaphylactic shock. Thus, fire ants are not simply an aesthetic nuisance, but they can pose a significant threat to the health of cemetery visitors.

Fire ants were identified in the Jackson Street and Shadowbrook cemeteries. For those two properties we recommend minimally that individual mounds be treated with a product such as Amdro (hydramethylnon). An even better approach is the use of Amdro as a broadcast fire ant bait while fire ants are foraging. After 10-14 days it should then be used as an individual mound treatment on any

mounds that continue to be a problem. This approach should be used twice a year, typically in April or May and again in September or October. A good discussion is provided by <http://pubs.caes.uga.edu/caespubs/pubs/pdf/B1191.pdf>.

Staffing Level

Currently the city is using staff from their Public Works department to perform minimal maintenance on the three cemeteries, estimated at around 2 acres.

We typically recommend two workers and one supervisor, *on a full-time basis*, per 10 acres. This is based on the Boston Historic Burying Grounds Initiative and is particularly suitable for Suwanee's situation since it is estimated that mowing old cemeteries with 3-dimensional monuments requires six-times the labor of modern lawn park cemeteries.

Thus, while these 2 acres do not represent a particularly large commitment and do not require a large staff, we do offer several recommendations.

The first involves staffing level. We recommend that one individual be assigned to the three cemeteries exclusively three days a week, with a supervisor spot checking progress on a daily basis.

Appropriate maintenance established by good practice includes weed control, tree trimming, pruning, seasonal cleanup, maintaining the roads, conducting section inspections, survey of monuments for maintenance needs, maintenance of shrub beds, maintaining section signs, rehabilitation of barren areas, raking, resetting stones as needed, inspecting and repairing fences, watering newly planted areas, sodding as necessary, identification of trees for removal, removal of flowers and grave decorations, and removal of wild growth.

An individual assigned to the cemeteries on a consistent basis would also allow the city to train that individual in the appropriate way to reset monuments, as well as to make simple repairs.

Staff Training

Sadly, professional training in the landscape industry, at least among the public, is undervalued. This contributes to rapid turn-over and inappropriate maintenance activities.

In 2005 the Associated Landscape Contractors of America (ALCA) and the Professional Lawn Care Association of America (PLCAA) merged to form the Professional Landcare Network (PLANET). This organization offers three certification programs.

The first is the Certified Landscape Technician – Exterior. The exam for this certification is a hands-on field test and candidates can be tested in Installation, Maintenance, or Irrigation.

The second is Certified Turfgrass Professional – a comprehensive study of both warm and cool-season turfgrasses developed by the University of Georgia Center for Continuing Education. Certification in this area demonstrates a mastery of weed, insect and disease identification/control, as well as diagnosis of common turfgrass problems. The material supports Integrated Pest Management concepts and pesticide safety – significantly reducing the cemetery's liability for operations.

The third is Certified Ornamental Landscape Professional. This certification emphasizes tree and shrub maintenance procedures with candidates concentrating on landscape trees and ornamental woody plant physiology, health care management, and establishment.

There are also local programs. For example, the Georgia Green Industry

Association offers certification in both landscape and plants.

The city should ensure that the individual assigned to the cemetery is trained and certified. This is the difference between the typical “mow, blow, and go” approach to maintenance and true professional landscape care.

Cemetery Trees

None of the cemeteries have a significant number of historic trees, yet each cemetery exhibits clear tree issues. At Sims Lake Park the historic cedars have died out and the cemetery is largely overtaken by second growth trees that require thinning. At Jackson Street parts of the cemetery have been taken over by second growth and require thinning. In addition, a pine tree toward the front of the cemetery is diseased and should be removed. At Shadowbrook, Bradford pears form a border that will eventually require replacement (hopefully with trees that are more in keeping with a historic cemetery). The few old trees on the cemetery require inspection by a certified arborist and extensive pruning.

Maintenance Issues

Maintenance involves at least four basic issues: watering, fertilization, pruning, and pest control.

The city does not, on a routine basis, water trees, relying instead on rainfall. While this is typically acceptable and rarely do mature trees require watering, the landscape plan should include provisions for deep-root watering of historic trees during periods of severe drought (assuming this is permissible). This is a critical step necessary to protect the historic landscape fabric of the cemetery. Using a root feeder without fertilizer, it is possible to apply water 12-inches below the surface. This approach can not only be used during severe drought, but also during extended periods of

dry weather during the winter (as long as the temperatures are above freezing).

The city reports that no tree fertilization (or soil testing) is conducted. Again, the trees are vital components of the landscape. They represent part of the historic fabric and steps must be taken to protect that aspect of the landscape and vista. As previously discussed for turfgrass, soil testing is not costly – only \$4 per sample.

While shoot growth (growth occurring in the present year) and foliage color are often used as indicators of nutrient deficiency, the best indicator of whether fertilization is necessary is a soil test. Samples should be taken every 3 to 5 years to determine whether any macro or micronutrients are lacking.

Based on the recommendations of a certified arborist, the cemetery should then anticipate periodic fertilization (possibly including adjustment of pH through liming and the addition of soil amendments). Fertilization should be conducted on the basis of need as excess fertilization can damage trees; nevertheless, the ISA position is that tree fertilization should be done in accordance with ANSI A300 (Part 2)-1998 standards.

Fertilization is typically accomplished through deep root fertilization – an approach where the liquid fertilizer is injected into the soil with a probe, usually 6 to 12-inches below the surface at a spacing of about 2 to 3 feet. This process not only provides fertilization, but also some aeration of the soil. An alternative approach uses a drill to excavate holes in a similar pattern which are then filled with a granular fertilizer. Either is acceptable. The ANSI 300 standards allow foliar applications, injections, or implants only when soil application is impractical or ineffective.

It is best to fertilize trees when they are actively growing and have available water to help absorb nutrients. In the Suwanee area this

Figure 25. Examples of tree issues at the three cemeteries. Top row illustrates second growth pine and hardwood in areas of grave depressions (left) and diseased pine (right) at Jackson Street. Middle row illustrates a Bradford pear that was never adequately pruned when young (left) and a large oak that requires pruning at Shadowbrook. The bottom row illustrates small second growth trees to be removed (left) and a dead cedar (right) at Sims Lake Park.

is typically from the spring, after new leaves emerge, through mid-season. Fertilizer should not be applied late in the season or during periods of drought.

In a cemetery setting organic fertilizers should be the primary choice. These materials, such as cottonseed meal and bone meal, have much lower salt indices than inorganic fertilizers – resulting in reduced salt uptake by monuments. This is important since salts cause staining, spalling, and deterioration of marbles,

Figure 26. Example of a tree that requires removal before it damages the stone.

sandstones, brick, and even granites. In addition, organic fertilizers have a slower release rate and are easy on the root systems.

There are a number of trees that require pruning for either thinning or cleaning. Thinning is a technique of pruning that removes selected branches to increase light and air movement through the crown. This also decreases weight on heavy branches. The

natural shape of the tree is retained and its overall health is improved. In cleaning, the pruning removes branches that are dead, dying, diseased, crowded, broken, or otherwise defective. This includes narrow crotches.

Trees should be pruned in such a manner as to preserve the natural character of the plant and in accordance with ANSI A300 (Part 1) - 2001 standards.

In pruning, branches should always be cut just beyond the branch collar (an extension of the main stem) and not flush with the trunk. Large branches should be removed with three cuts to prevent tearing of the bark which can weaken the branch and lead to disease. All pruning within the cemeteries should be performed by an ISA Certified Arborist, preferably one who is also an ISA Certified Tree Worker/Climber Specialist.

It is critical that the city use only ISA Certified Arborists for the tree work in the historic cemeteries. We understand that the city staff includes certified arborists, but should outside contractors be required, there are two within Suwanee: Michele Amber with Elegant Elements, 404-403-1439 and Theresa Schrum at 404-805-4183. We can provide additional certified arborists from other towns, if desired.

Trees should be inspected for potential threats to monuments, as well as general health (see Figure 25). Ideally these inspections should be made yearly and after any storm where the winds exceed 55 mph.

We recommend removal of second growth trees at both Jackson Street and Sims Lake Park cemeteries. At Jackson Street the areas around the edges of the cemetery should be thinned back 25 feet, removing all trees under 8-inches dbh. This would serve multiple goals. It would improve site security by reducing hiding areas. It would allow “lost” graves to be integrated into the cemetery. And it would help

minimize damage to stones caused by tree falls during severe weather.

At Sims Lake Park the city may desire to limit removal to trees under 4-inches dbh in order to minimize the opening of the canopy and resulting increase in herbaceous vegetation.

Also at Sims Lake Park, we recommend that all of the dead cedars be removed. These trees should be replaced by 1-2 inch caliper cedars in order to maintain the original landscape of the cemetery.

At Shadowbrook there is at least one large oak that requires careful pruning to open the canopy and remove dead wood. This is a very beautiful tree and should receive special care in order to maintain the character of the cemetery.

Care must be taken to protect stones and monuments during the pruning process. Rigging must be used to minimize the potential for damage to stones or the landscape. Under no circumstances are tree climbers (hooks, spikes, gaffs) to be worn while ascending, descending, or working in trees to be pruned.

There are some situations in the cemetery where plantings – intentional or voluntary – have grown to interfere with stones or fences (see, for example, Figure 26). In these cases a decision needs to be made concerning the value of the planting vs. the value of the monument. Where the tree has greater value, it may be appropriate to slightly relocate the monument – moving it to a location where additional damage will be avoided. Otherwise, it is necessary and appropriate to remove the tree. This decision may be aided by carefully evaluating the health of the tree involved.

When removal is deemed necessary the trunk should be cut as close to the ground as possible, leaving the stump in place to decay naturally. No chemical additives should be used to hasten decay, although it is acceptable to

paint an herbicide on the stump if it is a tree that will promote suckers.

Selection Issues

Cemeteries, in general, have historically been dominated by large deciduous trees, although evergreens such as cedar are also very common. They provide a distinctly inviting image for visitors and passersby. These trees also provide some visual separation from adjacent buildings – especially in cluttered urban environments.

Ideally the trees selected should be historically appropriate and plantings should focus on those tree species that are known to have been used. While diversification may be acceptable, it should not dilute the original design or intent. Therefore, we urge care in selecting additional plantings, focusing on a small number of historically appropriate trees to maintain the historical integrity of the cemetery. Examples of generally acceptable trees might include arbor vitae, cedar, or some oaks.

Some trees, whether historically appropriate or not, should probably be avoided since they pose significant maintenance issues. These include trees that produce dense shade (causing problems with the turfgrass); trees that exhibit suckers or surface roots (also causing turfgrass problems, e.g., beech, honeylocust, linden, poplar, and willow); trees that drop large quantities of leaves, seeds, or sap (such as ash, black cherry, catalpa, ginko, horsechestnut, magnolia, mulberry, and sweetgum); and trees that are especially weak or vulnerable to wind or ice damage (such as ash, black cherry, pine, poplar, red maple, silver maple, tuliptree, willow, and white ash).

While we understand that trees such as the Bradford pears planted as a border at Shadowbrook are often used because of their fast growth, they are not historically appropriate, are short lived, and require

Figure 27. Pruning issues at Shadowbrook and Jackson Street cemeteries. Top row, examples of shrubs and weedy plants that require removal of the weedy materials and renewal of the shrub. Middle row, left, dead shrub requires removal and replacement; right, example of pruning debris from the previous season that were never collected. Bottom, shrub at Jackson Street cemetery overwhelming a plot.

extensive early pruning to achieve a healthy form.

The Bradford pears at Shadowbrook do little to enhance the cemetery and we recommend their replacement with a more appropriate tree. An excellent screening choice would be arbor vitae or cedar.

Trees should also be replanted as older ones are removed and a general effort should be made to plan for future tree replacement, perhaps using a mix of fast-growing but short-lived trees intermixed with slow-growing but long-lived trees to create a planned appearance. It is also appropriate to plant replacement trees in anticipation of their need, allowing them an opportunity to become established before the diseased or damaged tree is removed.

Planting Issues

Locations chosen for planting should not interfere with gravestones, curbing, or fences. Issues of security should also be considered and the use of small trees that obscure eye level views should generally be limited or avoided.

Research is suggesting that trees, especially older mature trees, improve in health when turfgrass is removed under the branch spread and mulch is applied at a depth not exceeding 3 to 4-inches. Staff should be closely supervised to prevent over mulching of vegetation.

All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004).

Since water is unavailable in the cemeteries, young trees may be watered using bladders or irrigation bags.

Shrubbery

None of cemeteries evidence an abundance of plantings, although several plantings are found at both Shadowbrook and Jackson Street. In both cases the shrubs have been allowed to grow out of control, intermixing with weedy species. It is today difficult to ascertain what is worth retaining and what should be removed.

Pruning

Shrubs intermingled with weedy plants are creating large masses of tangled vegetation, primarily at Shadowbrook Cemetery. In these cases it is necessary to first remove the weedy material to expose the original shrub. Given the poor condition of these plantings, radical renewal or rejuvenation pruning is necessary. Renewal pruning means cutting the plants back to within 6 to 12 inches of ground level. In this instance, timing is more important than technique. The best time to prune severely is before spring growth begins. Pruning in late fall or midwinter may encourage new growth which can be injured by cold. Renewal pruning results in abundant new growth by midsummer. Once the new shoots are 6 to 12 inches long, the tips should be pruned to encourage lateral branching and a more compact shrub.

Renewal pruning works well with most broadleaf shrubs, while narrow-leaf evergreens (such as boxwood, which we did not observe) do not respond well when severely pruned and may actually decline. A better approach for these narrow-leaf evergreens is cutting them back slightly and transplanting – moving them away from the stones they are obscuring.

Those plants that can be saved by careful pruning should be. Those which are dead or which cannot be rehabilitated should be removed and similar species replanted.

Other Landscape Issues

Graveled Plots

Some lot owners at Shadowbrook have chosen to use gravel, retained by coping, rather than allow the plots to be grassed. Often lot owners do this thinking that it will reduce maintenance. Unfortunately, as shown by Figure 28, this is rarely the case. In fact, these gravelled lots almost always present a variety of long-term maintenance problems and the association should discourage the practice whenever possible.

Too often the lots, once laid, receive no additional maintenance by the families. As a result, the gravel thins through time, ultraviolet light breaks down the underlying weed block, exposing it and allowing further deterioration. In addition, weeds will often begin to grow through the weed block and gravel. The typical solution to this, rather than laborious hand weeding, is to apply herbicides. Since there is rarely an effort made to prevent future weeds, chemical control becomes a routine practice – causing long-term damage to the memorials. In addition, the weeds killed by the herbicide create a disheveled appearance that detracts from the overall cemetery aesthetics.

Where families have chosen this practice and are unwilling to allow grass, they should be informed that it is their responsibility to replace weed block and periodically infill plots with additional gravel in order to keep them maintained. With the realization that gravel is not a “silver bullet,” but will require long-term maintenance, families may be willing to allow plots to be converted to grass which is more historically appropriate and dramatically softens the cemetery landscape.

Where family members can no longer be identified, gravel plots should be converted to grass.

Gravel is also used as a grave decoration in the African American Jackson Street cemetery. Historically families have replenished such decorations yearly. The city should make no effort to maintain the gravel, but allow these graves to slowly convert to grass.

Sinking and Collapsing Graves

The Jackson Street cemetery has a number of sinking or collapsing graves. One such grave in a wooded area is illustrated by Figure 25. Figure 29 illustrates the undulating topography typical of African American cemeteries.

Now that the cemetery has been mapped, these areas may be backfilled with clean sand. The use of sand is important since should future archaeological work be required at some time in the future, the sand will stand out clearly, allowing the original depression to be precisely identified.

The backfilling of graves, however, will

Figure 29. Undulating topography at the Jackson Street cemetery is the result of numerous sunken graves.

also require that the city reset stones, since they must not be allowed to be covered by the fill.

Figure 28. Example of unmaintained graveled plot. Note also the damaged concrete block plot border or coping.

Likewise, grave goods (if present) must be relocated to the surface.

Recommendations

The use of large deck mowers in the historic cemeteries is inappropriate. We recommend the use of only walk-behind mowers with 21-inch decks at Jackson Street and in the congested areas of Shadowbrook Cemetery.

All mowers used in the cemeteries should be fitted with closed cell foam bumpers to reduce the damage to the stones. These bumpers should be inspected on a weekly basis and replaced as needed.

Mowing frequency should be based on the growth rate of the grass, ensuring that no more than 1/3 of the of the grass blade length in any one mowing.

Extra care should be used to prevent scalping the grass - a practice which is likely caused by the use of mowers that are too large for the irregular terrain.

The nylon trimmer line should be no thicker than 0.065-inch. Operators of the equipment should be instructed in the proper use of the equipment to minimize damage to the stones in the cemeteries.

Soil analysis should be conducted to determine if adjustments are necessary for the turfgrass. Where fertilization is needed, only organic, slow release fertilizers should be used in order to minimize salt damage to the stones.

Limited pre-emergent and post-emergent weed control should be instituted at Shadowbrook and Jackson Street using liquid herbicides applied as a course spray, taking care to avoid stones. The herbicides will affect the stones and this work will need to be very carefully done to ensure that the stones are not damaged.

We recommend renovation of the turfgrass at Jackson Street and Shadowbrook cemeteries, perhaps on a section-by-section basis. Converting to a good turfgrass may reduce the level of mowing and will minimize the need for weed treatments.

In heavy shade areas we recommend the conversion from turfgrass to mulch. This will reduce maintenance demands and provide a healthier environment for the historic trees.

It is critical that the city develop a fire ant control program that involves, minimally, individual mound treatments for all three cemeteries, especially Shadowbrook and Jackson Street.

One technician should be assigned to the three cemeteries on a part time basis (three days a week), with additional assistance as needed. This technician should be certified by PLANET (or some similar local organization) in categories such as Landscape Technician - Exterior, Turfgrass Professional, or Ornamental Landscape Professional.

Trees in the cemeteries should be pruned for thinning or cleaning as recommended by a certified arborist. There are several trees that are diseased at Jackson Street. They should be evaluated for their hazard and need for immediate removal. Only ISA Certified

Arborists should be responsible for tree pruning and maintenance.

There is much volunteer growth around the edge of the Jackson Street Cemetery and within the Sims Lake Park Cemetery. This growth should be carefully thinned to open the cemeteries and minimize potential damage to stones. Volunteer trees whose placement or growth threatens monuments should also be removed.

As a general rule, trees that are removed from the landscape should be replaced using historically appropriate species, such as oak or cedar.

All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004). Nursery stock should be carefully inspected and specimens with wounds, crooked or double leaders, broken branches, or girdling roots should be rejected.

Trees within the cemetery should be fertilized on a routine basis and should be professionally evaluated and pruned at least once every 5 years by an ISA Certified Arborist. All trees should be inspected yearly and after any storm with winds in excess of 55 mph.

Shrubbery is limited to Jackson Street and Shadowbrook. Where found, however, it has been largely ignored, resulting in large clumps or masses that require careful pruning to shape the shrub and remove weedy vegetation.

The use of gravel in plots at Shadowbrook should be discouraged. Grass is more historically appropriate and easier to maintain. Graveled graves are acceptable at Jackson Street, but the city should not attempt to maintain these graves, allowing grass to overtake them instead.

All sunken graves at Jackson Street should be carefully filled with clean sand. Grave markers and associated grave goods must be reset. The graves should then be resodded.

OTHER MAINTENANCE ISSUES

Signage

None of the city's three cemeteries have signage. Although the Sims Lake Park Cemetery is not currently accessible to the public there is considerable wisdom in installing signage for the occasional visitor that may happen upon the cemetery. The remaining two cemeteries are readily accessible and they deserve appropriate signage.

From a cemetery preservation perspective signage is of four basic types: identification, regulatory, informational, and interpretative. They are generally recommended in this same priority.

Identification signage might include the name of the cemetery and might also include the cemetery's date of founding and historic significance (i.e., eligible for listing or listed on the National Register).

Regulatory signage specifies laws, regulations, or expected standards of behavior. These should be clearly posted at the entrance to the cemetery.

Informational signage might include directional signs, routing, and section numbers. These should have a consistent signage theme (for example, colors, size, font, and placement). Interpretative signage might include information on historic people buried in the cemetery. It is important that this signage be discrete, so as not to detract from the dignity of the cemetery.

Many cemeteries find that brochures are a useful supplement to traditional signage, allowing greater flexibility. Brochures may also replace (or at least reduce the need for) informational and interpretative signage.

Brochures also have the benefit of being useful as educational and promotional tools.

We recommend that the city develop regulatory signage dealing with, minimally, these issues for all three cemeteries (perhaps with some modifications of language as might be needed):

- ❖ Many of the stones in this cemetery are very old and may be easily damaged. Consequently, absolutely no gravestone rubbings will be allowed.
- ❖ The stones and monuments in this cemetery are fragile. Please refrain from leaning, sitting, or climbing on any monument. All children must be escorted by an adult.
- ❖ Absolutely no alcoholic beverages, fireworks, or firearms are allowed in the cemetery. Proper conduct is expected at all times.
- ❖ No pets are allowed in the cemetery.
- ❖ Flowers will be removed by the staff 10 days after holidays or when the arrangements become wilted and unsightly.
- ❖ No plantings are allowed within the cemetery and the cemetery will enforce its right to remove any plantings deemed inappropriate, diseased, or damaging the cemetery.
- ❖ For additional information concerning maintenance issues, please contact _____ at _____. In case of emergency contact _____.

We also recommend that initial interpretation signage consist of a Georgia Historical Marker erected at the entrance to the Jackson Street Cemetery, as well as the corner of Suwanee Dam Road and the Buford Highway. Information on this program is available from the Georgia Historical Society or at http://www.georgiahistory.com/files/0000/0027/Marker_Application_Materials.pdf.

Flowers and Other Grave Decorations

We have previously recommended that the city adopt flower regulations. Figure 30 provides an indication of why that is so necessary. During our assessment we found flower debris – faded, unsightly, and no longer associated with any grave – at several locations in the Shadowbrook Cemetery.

Many cemeteries are beginning to also struggle with the increasing tendency for the public to load graves with personal items. This problem is not unique to the United States, but has also been documented in Great Britain, where solar-powered lights, statues and windmills have appeared.

Some cemeteries have established rules based entirely on appearances. At times these are intentionally vague, for instance referring to “adornments considered offensive or otherwise inconsistent with the dignity of the cemetery.” In other cases a fairly detailed list of objectionable items has been devised: “Toys, stuffed or otherwise manufactured or sculptured animals, statues or statuettes, personal items and/or other unsightly objects.”

Although aesthetics may reasonably be considered to suffer, most cemeteries attempt to control the proliferation on the grounds of the potential hazard to workers – a legitimate

concern considering the use of mowers and trimmers on a routine basis.

Many cemeteries enact provisions that allow staff to remove such objects (“temporary objects”) when they become withered, unsightly, or an obstruction to maintenance. Other cemeteries exclude all objects made of concrete, glass, plastic, fiberglass, metal,

Figure 30. Faded flowers and grave decorations are issues that the city must address.

ceramic, and wood, again with the justification of safety.

Cartersville, Georgia itemizes items, although they justify the exclusion in terms of safety: “no hanging poles, no bird feeders, no glass containers, no ceramic figurines, no

statuary, no concrete pots, no toys, no rocks, no bricks, or any other objects that may be hazardous to personnel or equipment” is allowed.

Figure 31. Two examples of orphan stones at the Shadowbrook Cemetery.

While wishing to be sensitive to those who have lost loved ones, there must still be a middle ground that helps control the abundance of materials that can appear in even historic cemeteries. Given the existing wording of Cartersville, Georgia, we would be inclined to support similar wording.

Trash

There was relatively little trash in any of the cemeteries and we take this as evidence that the Public Works staff is doing a good job of picking up the areas, probably prior to mowing or other activities.

We did not, however, see trash containers at either cemetery. This was most noticeable at Jackson Street, where funeral debris (flower stands, styrofoam, and similar items) were found just beyond the cemetery in the woods. We recommend the placement of a small, discrete receptacle at the entrance to the Jackson Street Cemetery.

During the process of thinning the trees along the edges of the Jackson Street Cemetery, the city should endeavor to remove this trash (there is not a great deal).

Lost Stones

Lost, orphan, or misplaced stones were observed at the Shadowbrook Cemetery (they were not observed at the Jackson Street or Sims Lake Park cemeteries). These are stones that have been removed from the original grave and deposited elsewhere in the cemetery. Stones move for a variety of reasons, but the most common is an effort by maintenance crews to place them out of the way.

Staff must understand that once a stone is separated from the grave, the potential that the grave will become lost – regardless of the quality of the cemetery records – dramatically increases. Thus, every effort should be made to ensure that stones remain on their grave.

Stones should never be allowed to be removed from their original location without full documentation – where was the stone found, why is it being removed, where is it being stored, what should be done to reset the stone, what action is being taken to resolve the issue.

We recommend that the misplaced stones at Shadowbrook be collected and stored by the city in the hope of being able to ascertain their original locations and replace them.

Recommendations

The city should develop regulatory signage for all three cemeteries. This signage should minimally deal with proper care of the monuments, prohibiting rubbings and warning visitors of their fragile condition; it should prohibit certain behaviors and actions, such as use of alcoholic beverages; it should establish simple guidelines for plantings, as well as the placement and removal of floral and grave decorations; and it should include contact and emergency information.

Georgia has a very active historical marker program and this would be an appropriate and dignified way to explain to visitors the historic roots and significance of the Jackson Street and Shadowbrook cemeteries (which are likely to receive the greatest traffic).

Eventually it would be helpful to develop a brochure specific to the cemeteries ("Suwanee's Historic Cemeteries") that includes rules, maps, brief histories, and perhaps some information on those buried in the cemeteries. While primarily intended for families and visitors, it could also be used for promotion and fund raising.

The city should establish flower regulations that maintain the dignity of the cemeteries and allow reasonable maintenance. The city should limit flowers on graves to a maximum of 10 days. We also recommend that only cut flowers or live plants be used.

Trash does not appear to be a significant problem, but we do suggest that an appropriate receptacle be placed at the entrance to the Jackson Street Cemetery. A regular schedule of collection must be instituted.

When trees are being thinned at the edges of the Jackson Street Cemetery, trash and debris in the woods should be collected.

No stones should be removed from graves without adequate documentation. The apparently "lost" stones at the Shadowbrook should be researched and replaced as well as possible. Until then they should be collected and stored for safekeeping.

CONSERVATION ISSUES

What is Conservation?

Conservation is *not* restoration. Restoration means, very simply, making something “like new.” Restoration implies dramatic changes of the historic fabric, including the elimination of fabric that does not “fit” the current “restoration plan.” Restoration is inherently destructive of patina and what makes a property historic in the first place. The “restorer” of a property will know nothing of the Secretary of the Interior’s Standards for Preservation and care even less.

One of the most important early writings was that of nineteenth century art critic and observer John Ruskin. In *The Seven Lamps of Architecture* published in 1849 and in particular, “The Lamp of Memory,” Ruskin introduces us to the issue of trusteeship where he explains,

it is again no question of expediency or feeling whether we shall preserve the buildings of past times or not. We have no right whatever to touch them. They are not ours. They belong partly to those who built them, and partly to all the generations of mankind who are to follow us.

Ruskin also crisply stated the difference between restoration and repair, noting that “restoration” means,

the most total destruction which a building can suffer: a destruction out of which no remnants can be gathered: a destruction accompanied with false description of the thing destroyed.

In contrast conservation can be defined as preservation from loss, depletion, waste, or harm. Conservation seeks to limit natural deterioration.

Conservation will respect the historic fabric, examine the variety of options available, and select those that pose the least potential threat to the property. Conservation will ensure complete documentation, whether it is of cleaning, painting, or repair. Conservation will ensure that the work done today does not affect our ability to treat the object tomorrow.

Standard for Conservation Work

As Ruskin stated, the City of Suwanee is the steward of these cemeteries, holding what belonged to past generations in trust for future generations (even more so if, as recommended, the city obtains clear title to Shadowbrook and Jackson Street). As such the city bears a great responsibility for ensuring that no harm comes to the properties during their watch.

One way to ensure the long-term preservation of these properties is to ensure that all work meets or exceeds the Secretary of the Interior’s Standards for Preservation, discussed on pages 2-4 of this study.

Another critical requirement is that the city ensure that any work performed in the cemeteries – whether it involves the repair of iron work, the cleaning of a stone, or the reconstruction of a heavily damage monument, is conducted by a trained conservator who subscribes to the Standards of Practice and Code of Ethics of the American Institute for Conservation of Historic and Artistic Works (AIC).

These Standards cover such issues as:

- Do no harm.
- Respect the original fabric and retain as much as possible – don't replace it needlessly.
- Choose the gentlest and least invasive methods possible.
- Is the treatment reversible? Is retreatment possible?
- Don't use a chemical without understanding its effect on the object and future treatments.
- Don't falsify the object by using designs or materials that imply the artifact is older than it is.
- Replication and repairs should be identified as modern so that future researchers are not misled.
- Use methods and materials that do not impede future investigation.
- Document all conservation activities – and ensure that documentation is available.
- Use preventative methods whenever possible – be proactive, not reactive.

The AIC Code of Conduct also requires a professional conservator provide clients with a written, detailed treatment proposal prior to undertaking any repairs; once repairs or treatments are completed, the conservator must provide the client with a written, detailed treatment report that specifies precisely what was done and the materials used. The conservator must ensure the suitability of materials and materials – judging and evaluating the multitude of possible treatment options to arrive at the best recommendation for a particular object.

It is important to clearly note that while modern stone companies are very familiar with new stone, no matter how long they have been in business, they are not an appropriate choice for repair work. Monument dealers do not have the skills, training, tools, or expertise to conduct the delicate work of historic monument repair,

as will be discussed in greater detail in a following section.

In most cases gravestones are fragile and their repair is delicate work. There are many commercial products on the market, used by many commercial stone companies, which are totally inappropriate for historic stone.

Estimation of Conservation Needs

A stone-by-stone assessment was included in this assessment, and the results are identified in Appendices 1-3 as a series of conservation treatment proposals. These documents provide an overview of the problems faced by a particular monument, as well as specific recommendations for treatment.

General Types of Stone Damage

Mechanical Repair

Mechanical repair most often means the rejoining of fragmented stones. Appropriate conservation treatment will usually involve drilling and pinning, carefully aligning the two fragments. Threaded 316 stainless steel rod (or occasionally nylon) and epoxy adhesives formulated for the specific stone are used in this type of repair. Diameters and lengths of pins vary with the individual application, depending on the nature of the break, the thickness of the stone, its condition, and its expected post-repair treatment.

Sometimes pins are not used to save time and money. Instead the pieces are simply joined using a continuous bead of epoxy or some other adhesive. Experience indicates that for a long-lasting repair, particularly in structural applications, use of pins is usually necessary. Moreover, most adhesives are far stronger than the stone itself, meaning that failure of the repair is likely to cause additional damage to the stone.

Figure 32. Examples of stone damage requiring treatment. Top row left to right: broken tab in socket that requires a blind pin repair and resetting; die on base that requires repining and resetting. Middle row, left to right: tab in socket that requires resetting only; example of ferrous pin damage; large, unstable monument. Bottom row, left to right: die on base with failed brass pins; granite die on base that requires resetting with setting compound.

At times mechanical repairs also involve dismantling intact elements and ensuring that a sound foundation is present. Foundation work may involve filling in depressions, establishing a concrete footing, or taking other measures to ensure that subsidence is minimized. Then the entire structure is repaired as it is reassembled.

In some cases concrete has been used to repair broken stones. This is inappropriate. Not only is the result aesthetically unappealing, but the concrete is far harder than the stone and can cause long-term deterioration. Because the concrete is very difficult to remove, we generally recommend that stones repaired with concrete be left as they are, as long as the old repair is stable and causing no immediate damage or problems. Such repairs, however, should be carefully monitored. It is likely that the time will come when these old repairs will fail and a more appropriate repair will become possible.

Mechanical repair should be undertaken only by trained stone conservators.

Composite Repair or Infilling

Composite stone repair consists of filling voids with a natural cementitious composite stone material resembling the original as closely as possible in texture, color, porosity, and strength. This type of repair may be used to fill gaps or losses in marble and is often used to help slow scaling of bedded sandstone exposed to the elements.

Under no circumstances should latex or acrylic modified materials be used in composite stone repair. These additives may help the workability of the product, but they have the potential to cause long-term problems. Such products are not appropriately matched in terms of strength or vapor permeability.

More suitable materials are materials such as Jahn (distributed by Cathedral Stone) or the lime-based mortars of U.S. Heritage. These closely resemble the natural strength of the

original stone, contain no synthetic polymers, exhibit good adhesion, and can be color matched if necessary.

All infill work should be conducted by a trained conservator. The Jahn products, in fact, require certification in their use through Cathedral Stone.

Resetting Tilted Stones

Some monuments are seriously leaning. When this occurs to headstones, the tilt may be sufficient to precipitate a ground break, dramatically increasing the cost of repair. For other monuments the tilt may be sufficient to cause the monument to fail and, in the process, there may be additional damage or even injury to visitors.

As a result, resetting is a common need at many old cemeteries. The simplest resetting involves stones which are tilted or which have come out of the ground. These should never be reset using concrete, but rather should be set in pea gravel. This approach allows the stone some movement should it be accidentally impacted by lawn maintenance activities. The pea gravel will also promote drainage away from the stone, helping the stone resist the uptake of soluble salts.

Resetting stones that are not broken is a task that city staff or volunteers can be trained to accomplish. This should be a routine maintenance activity, conducted perhaps twice a year.

Resetting or Repairing Tab in Socket Stones

In cases where stones are loose in a supporting base, resetting involves the use of a high lime mortar mix. In this and all other areas of treatment, the city should avoid the use of Portland cement. It is entirely too hard for the stones and may contain impurities that will damage the stone through long-term exposure. More appropriate is a 1:3 mix of air lime (such as

Table 3.
Comparison of Different Cleaning Techniques

Cleaning Technique	Potential Harm to Stone	Health/Safety Issues
Sand Blasting	Erodes stone; highly abrasive; will destroy detail and lettering over time.	Exposure to marble dust is a source of the fatal lung disease silicosis.
Pressure Washers	High pressure abrades stone. This can be exacerbated by inexperienced users. Pressures should not exceed 90 psi.	None, unless chemicals are added or high temperature water is used.
Acid Cleaning	Creates an unnatural surface on the stone; deposits iron compounds that will stain the stone; deposits soluble salts that damage the stone.	Acids are highly corrosive, requiring personal protective equipment under mandatory OSHA laws; may kill grass and surrounding vegetation.
Sodium Hypochlorite & Calcium Hypochlorite (household and swimming pool bleach)	Will form soluble salts, which will reappear as whitish efflorescence; can cause yellowing; some salts are acidic.	Respiratory irritant; can cause eye injury; strong oxidizer; can decompose to hazardous gasses.
Hydrogen Peroxide	Often causes distinctive reddish discolorations; will etch polished marble and limestone.	Severe skin and eye irritant.
Ammonium Hydroxide	Repeated use may lead to discoloration through precipitation of hydroxides.	Respiratory, skin, and eye irritant.
D/2 Architectural Antimicrobial	No known adverse effects, has been in use for nearly 10 years.	No special precautions required for use, handling, or storage.

lime putty) or NHL (natural hydraulic lime) 3.5 and sand. Epoxy and other adhesives should never be used since once set it is virtually impossible to remove the material. Even the use of commercial setting compounds used by the monument industry should be limited to use on granite markers produced within the last 50 years.

If the tab and the socket are both intact, this is another activity that can be undertaken by trained staff or volunteers. It is critical that this work is conducted as soon as a problem is detected, since if the stone is allowed the break, a problem that can be simply and inexpensively corrected becomes a major conservation project.

Resetting Dies with Corroded Pins

At times re-setting may be made more complex by the presence of corroded iron dowels. Where present, these must be removed before the stones can be reset. If they are not removed, the iron corrosion continues and will result in the spalling and breaking of the stone itself.

Such a repair requires that the old pins be drilled out using a diamond core drill, new pins of stainless steel be inserted using an appropriate epoxy, and mortar then used to reset the monument. This is a treatment which should be performed only by a trained conservator.

Cleaning

A significant amount of damage may result from inappropriate cleaning techniques. The most common cleaning technique is the use of a bleach product – probably because bleach (either sodium hypochlorite or calcium hypochlorite) is widely available and inexpensive. It is, nevertheless, unacceptable for historic monuments.

Table 3 discusses problems with a variety of “common” stone cleaning processes widely used by commercial firms and the public. Cleaning is largely an aesthetic issue at all three cemeteries – we saw few examples where soil or biologicals were actually causing

damage to the monuments. Consequently, the city should embark on an educational program to discourage inappropriate cleaning – explaining not only the dangers of bleach and other commercial methods, but also pointing out that such activities diminish the historical value and ambience of the cemetery. These cleaning methods remove not only soil, but also the patina of age – leaving monuments that no longer appear historic.

This educational program should point out that cleaning – even when done correctly – will gradually erode monuments, making them susceptible to more soiling and damage. Consequently, cleaning should be conducted no more frequently than perhaps once every 5 years.

The safest product for cleaning is simply low pressure (less than 90 psi) water and a soft bristle brush. When some other assistance is needed a product that has been found safe for most stones is D/2 Architectural Antimicrobial distributed by Cathedral Stone.

Ironwork Conservation

Although ironwork has been mentioned previously in the section on Fixtures and Furnishings, we are briefly reviewing critical issues here.

Every effort should be made to retain all existing ironwork, regardless of condition. Replacement with new materials is not only aesthetically inappropriate, but often causes galvanic reactions between dissimilar metals. When some of the existing ironwork is incomplete, a reasonable preservation solution is to repair and maintain the remaining work rather than add historically inappropriate and incorrect substitutes. If replacement is desired, salvage of matching elements is preferred over recasting. Replication is typically not an appropriate choice since it is by far the most expensive course of action, and is often done so poorly.

The single best protection of ironwork is maintenance – and this revolves around painting. We have previously outlined specific steps and materials to use, focusing on minimal cleaning, followed by a rust converter and two final top coats of flat alkyd paint.

Repair may include reattachment of elements. Ideally, repairs should be made in a manner consistent with original construction. It may be appropriate to use small stainless steel braces with stainless steel nuts and bolts to re-attach coping rails to posts. While welding is often expedient, this approach causes a radical change to the fence. Once welded, pieces are no longer able to move with expansion/contraction cycles, and this causes internal stresses that may lead to yet additional structural problems. Careful inspection of fences in good condition reveals that virtually all connections were “slip joints” – allowing the parts to expand and contract.

When used, welds should be continuous and ground smooth, in order to eliminate any gaps or crevices. When finished, it should be difficult to distinguish the weld – the original metal should blend or flow directly into the reattached part.

Understanding Priorities

With limited funds it is often critical that organizations establish priorities for cemetery conservation/preservation projects, ensuring that the most critical issues are dealt with first.

First priorities are those we recommend undertaking during the current fiscal or calendar year. These are largely issues that have the potential to affect the public health and safety and consequently require immediate attention. They may also involve monuments where, if work is not conducted immediately, there is a high probability of additional damage and dramatically escalating repair costs.

Planning issues may fall into this high priority category as well. Through appropriate planning costly mistakes can be avoided. Planning also presents the opportunity – as we hope is evident in this study – of developing a preventative maintenance program that will help to ensure that appropriate actions are carried out on an on-going basis, limiting the need for future emergency treatments.

Second priorities are those which should be budgeted for over the next 2 to 3 years. They represent urgent issues that, if ignored, will result in both significant and noticeable deterioration of Suwannee's cemeteries. *Deferred maintenance is not only poor stewardship, but it is fiscally irresponsible. Simple repairs, delayed, turn into very expensive treatments.*

Third priorities are those that may be postponed for 3 to 5 years. They are issues that can wait for appropriations to build up to allow action. Because they are given this lower priority, however, they should not be dismissed as trivial or unimportant.

Recommendations

All work in the cemeteries should be conducted by trained conservators who subscribe to the Code of Ethics and Standards of Practice of the American Institute for Conservation of Historic and Artistic Works (AIC). This should be the minimum level of competency required by the city on all projects.

There are some treatments, such as resetting, cleaning, and some aspects of fence repair, which can be undertaken by volunteers and/or in-house staff with training and oversight. Other work, such as mechanical repairs and infills should only be performed by trained conservators.

Cleaning is a low preservation priority and the city should work with families to explain the problems that result from cleaning. The

cemetery should also work to educate families on the least damaging cleaning techniques.

GROUND PENETRATING RADAR SURVEY

Introduction

Ground-penetrating radar (GPR) is a near-surface geophysical technique. It involves the transmission of high frequency electromagnetic pulses from a surface antenna into the ground. The time between when this energy is transmitted, reflected from buried materials, and then received back at the surface is then measured. When many thousands of radar reflections are measured and recorded as antennas are moved along transects within a grid, a three-dimensional picture of anomalies – or features – can be created.

A range of antennae frequencies are available. Low frequency antennas (10-120 MHz) generate long wave-length radar energy that can penetrate up to 150 feet under ideal

conditions. However, there is a trade-off; they are capable of resolving only very large subsurface features. On the other hand, a 900 MHz antenna can penetrate only about 3 feet at most, but it is able to resolve features down to a few inches in diameter. GEL Geophysics, through extensive experience with cemetery studies, has determined that a 250 MHz antenna array provides an optimum arrangement, providing excellent resolving power at the depths required to identify coffin remains.

The effectiveness of GPR depends on yet another factor – the physical characteristics of the material through which the waves pass. Soils that are electrically conductive will attenuate the GPR waves, allowing only very shallow penetration. Soils that have electrically conductive clay or that are wet are poor

candidates for GPR studies. Other problematic soils are those that contain salts or that have relatively high magnetic charges. No significant problems were identified in the three study tracts.

numerous geophysical methods and instrumentation, including extensive experience with abandoned cemeteries and cemetery plots.

The Survey

There are a variety of additional factors

Figure 34. Bergstrom using the RAMAC GPR at the Jackson Street Cemetery.

affecting the success of a GPR survey, including the density of roots or other non-grave soil anomalies, as well as the operator of the equipment. Roots were a major consideration at the Sims Lake Park Cemetery; typically it was possible, however, to discern good grave signatures from other anomalies. At all three cemeteries a distinction is made between gravesites identified and potential gravesites. The former exhibit excellent signatures, consistent in all aspects with a grave shaft and coffin remains. The latter exhibit a number of characteristics, but are less clear. Examples are both are provided in Figure 33. The operator on this project, Mr. Jorgen Bergstrom, has more than a decade of experience with

The GPR study was conducted by GEL Geophysics using a RAMAC GPR system configured with a 250 MHz antenna array operated by Mr. Jorgen Bergstrom. The transmitter radiates repetitive short-duration electromagnetic (EM) signals into the earth from the antenna. EM waves are reflected back to the receiver by interfaces between materials with differing dielectric constants. The intensity of the reflected signal is a function of the contrast in the dielectric constant at the interface, the conductivity of the material which the wave is traveling through, and the frequency of the signal. The profiling recorder receives the signal from the antenna and produces a

continuous cross section of the subsurface interface reflections, referred to as "reflectors," "reflector events," or "anomalies." The skilled operator seeks to identify those reflectors or anomalies that are most consistent with grave shaft excavations.

Figure 35. Total station mapping of the Jackson Street Cemetery.

GROUND PENETRATING RADAR SURVEY

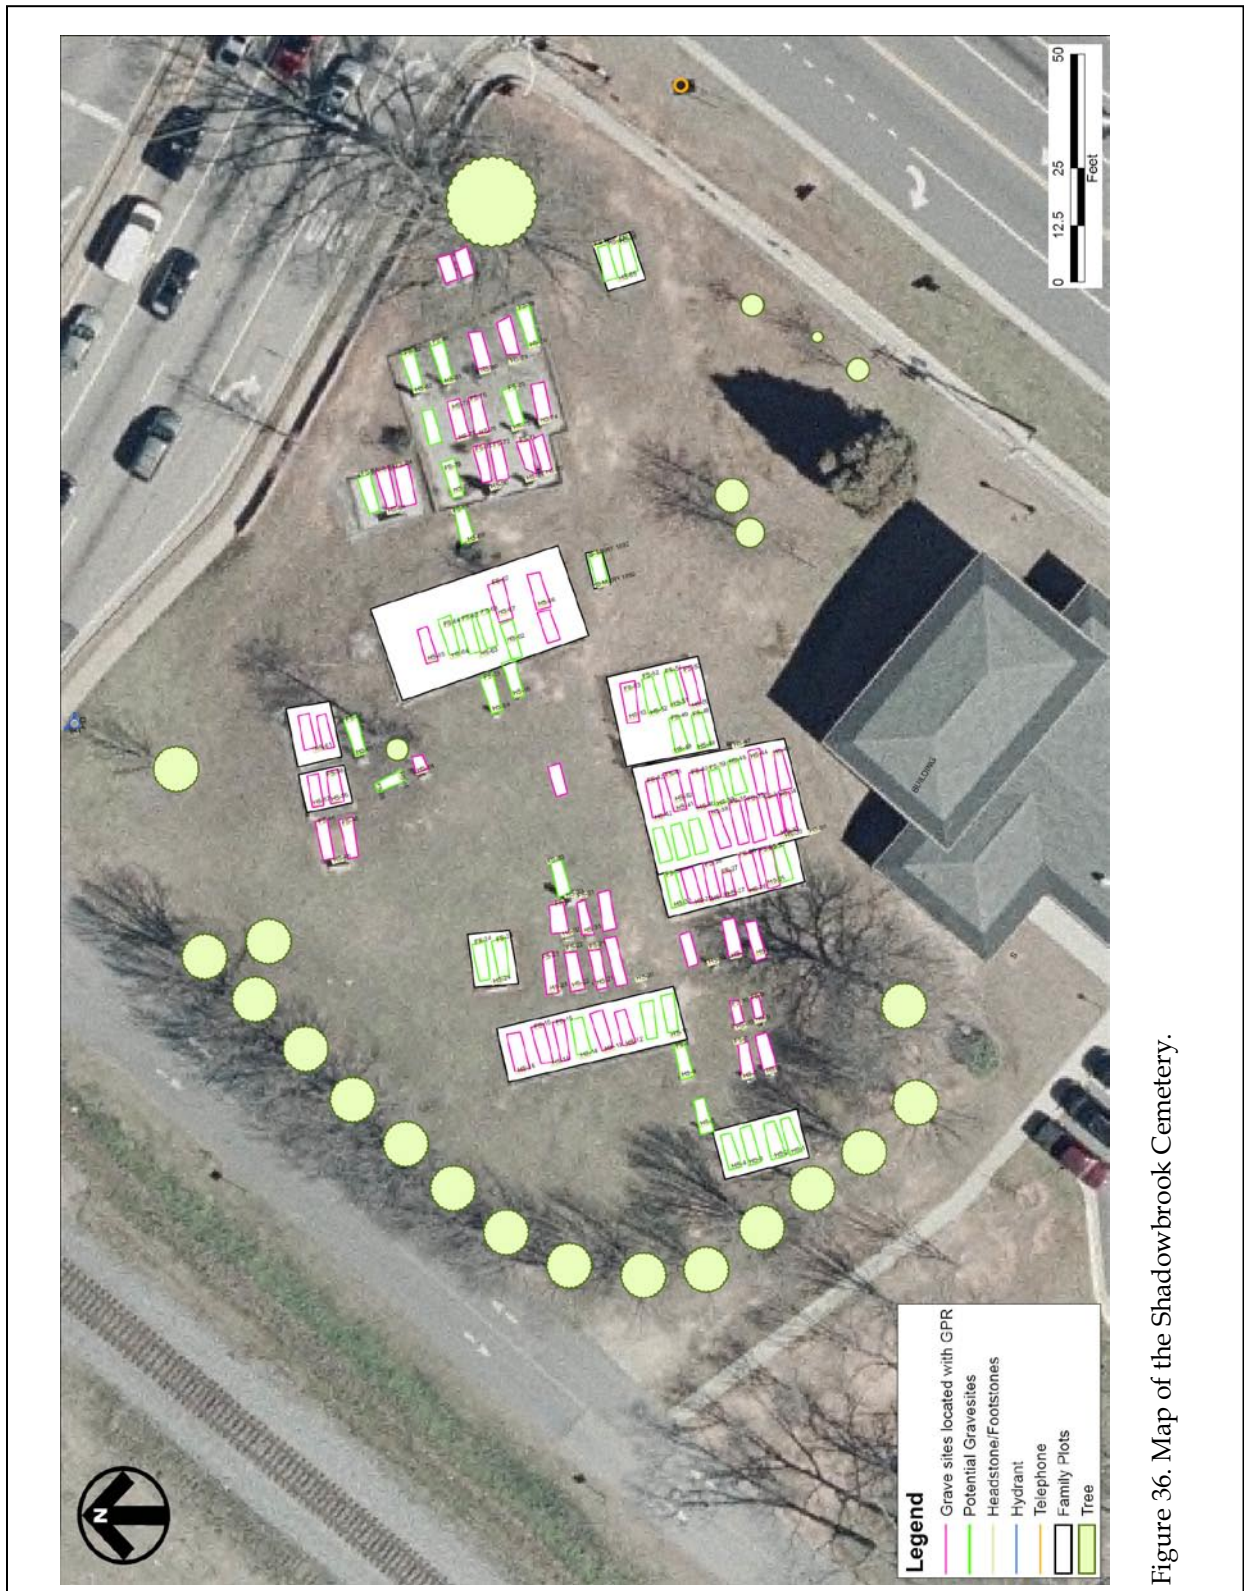

Figure 37. Map of Jackson Street Cemetery.

Figure 38. Map of the Sims Lake Park Cemetery.

In the case of this study, the GPR survey included all of the area within the identified property boundaries. At Sims Lake Park, where boundaries were not defined, the survey extended approximately 75 feet past the last identified grave to ensure that the full extent of the cemetery was identified. It was not, of course, possible to use GPR at above ground box tombs. At the Jackson Street Cemetery the survey was extended about 25 feet beyond the east and west boundaries, where possible in the thick tree cover, and about 75 feet to the south.

Data were collected in a grid laid out at each of the cemeteries. The GPR data were collected with 2.5 feet between parallel profiles. The geophysical data were processed and interpreted in the field, with anomalies having the signature consistent with a grave or potential grave marked in the field using paint. Their locations were then positioned by GEL.

It is possible, as with all GPR studies, that anomalies remain undetected due to either method limitations, subsurface soil conditions, or the occurrence of features below the depth of penetration of the signals.

Mapping

Given tree cover, it was determined that mapping would be best accomplished using a Trimble Geodimeter 600 Robotic total station and prism pole. The identifying numbers had been assigned by Chicora during the recordation of the cemetery.

The resulting maps are provided as Figures 36-38. They show all monuments, with their assigned numbers, as well as associated graves identified through GPR survey. In some cases, of course, the grave was clearly indicated by a depression, box tomb, or vault.

At Shadowbrook and Jackson Street, it was possible to tie the cemeteries into nearby infrastructure features – street curbs, sanitary sewers, and fire hydrants. This allows the

mapping to be added as a GIS layer, should the town desire to do so. At Sims Lake Park, however, there were no pre-defined GIS datums. An effort was made to obtain GPS coordinates using a Trimble 5800 Global Positioning System. It was found that the dense tree cover in the cemetery prevented an accurate signal. Thus, for this work the information has been tied as well as possible into the aerial photography supplied by the town. However, the locations have not been verified.

CEMETERY RECORDATION

As part of the assessment project, Chicora conducted a recordation project in the three cemeteries. This phase of the work involved numbering the monuments and collecting information concerning the marker and its inscription. A standard form was used for the collection of this information and these forms are presented in Appendices 4-6.

All monuments on a specific grave were given only one unique number. Footstones are not numbered, but are noted on the form as existing. Other associated monuments (for example, a commercial stone associated with a military stone) are given letter designations. Thus, there might be 1, 1a, 1b, and so forth.

These unique numbers were then used by GEL during their ground penetrating radar and mapping components.

The physical description included the type of marker, using standardized terminology (e.g., die on base, tab in socket, ledger), the inscription technique (such as carved, painted), the materials (marble, granite, brick), associations (such as a footstone or other item), and the presence of a stonecarver's name if visible.

The marker inscription, in each case, is a complete transcription of all information. Complete transcriptions, compared for example to those collected by many genealogists, includes all verbiage on the stone, not just names and dates. Such complete transcriptions provide important family history and social details that are lost if not collected. In addition, these details can assist in replacing the stone, if necessary.

As standard practice, illegible words are indicated with empty brackets ([]). Partially legible or interpreted words are indicated within brackets (In Mem[ory of]). Transcriptions identify obvious errors, for example "Scared [sic] to the Memory of." All punctuation and capitalization is as identified on the stone ("Aged, 42 yrs.").

Although not required by the city, our recordation also includes a digital photograph of each monument. This information is added to the form, providing additional details on the condition of the stone at the time of this project. The value of photography has already been demonstrated, allowing deterioration in some Jackson Street monuments to be documented between 2006 and 2008.

**CEMETERY FIELD SURVEY SHEET
INDIVIDUAL MARKER/MONUMENT**

Cemetery: _____ Grave #: _____ Photo No: _____

Name(s) on marker (last, first, middle): _____

Type of Marker/Monument: ☐ tablet headstone ☐ die in socket ☐ die on base
☐ government issue ☐ lawn-type ☐ plaque
☐ raised top ☐ pulpit ☐ die, base, cap
☐ bedstead/cradle ☐ table tomb ☐ box tomb
☐ ledger ☐ obelisk ☐ other: _____

Inscription Technique: ☐ carved ☐ painted ☐ other: _____

Material: ☐ marble ☐ granite ☐ concrete ☐ brick
☐ limestone ☐ fieldstone ☐ other: _____

Condition of Marker: ☐ cracked ☐ broken ☐ unattached/loose
☐ leaning ☐ old repair ☐ stained/soiled
☐ portions missing: _____ (1-5) ☐ other: _____

Stonecutter's Name: _____ City: _____ Location of Marker: _____

Footstone: _____ Material: _____ Design/initials: _____ Condition: _____

Grave Goods: _____

Inscription: _____

Surveyor: _____ Date: _____

Figure 39. Example of the survey form used by Chicora at the Suwanee cemeteries.

The recordation of the monuments on the three cemeteries provides multiple benefits to the city. They document the condition of the monuments at the time of this study, providing a permanent record of what is present in the cemetery. The records also provide data for the town to establish a cemetery web site, allowing citizens, genealogists, and historians access to data present in the cemeteries.

RECOMMENDATIONS AND FUNDING

With limited funds it is often critical that organizations establish priorities for cemetery conservation/preservation projects, ensuring that the most critical issues are dealt with first. There are different methods for assigning priorities; here we have simply organized the recommendations at each cemetery in a logical progression, but have assigned only a broad frame since we are not familiar with the funding levels available to the city.

The costs are based on the best information available at this time. Some are derived from previous projects; others are determined using Means Site Work and Landscape Cost Data. All estimates are 2009\$. We recommend that local costs be evaluated since there may be significant differences. Conservation costs do not include travel, per diem, or lodging. Some tasks could not be assigned a cost since we do not have adequate information to allow a sound judgment to be made. Other costs are assigned a value of "n/c" (no cost) since the activity is one that could be undertaken by the current in-house staff. Some "n/c" tasks can be reasonably be undertaken by volunteers.

Shadowbrook Cemetery

The total recommended costs for preservation work at Shadowbrook amount to approximately \$84,150 spread over five years. The first phase of this work is estimated to be about \$27,500. Of this the largest cost, at \$16,000, involves conservation treatment of high priority items. These include stones that are unstable and are therefore hazardous to the public, as well as stones that are a threat to themselves.

Second priority actions at Shadowbrook are estimated to cost \$46,500. Again conservation costs are significant -- \$13,000 --

reflecting the need to make repairs on a number of additional stones before their condition further deteriorates. Other major second priority actions include renovation of some lawn areas, beginning weed control program, and care for the historic oak on the property. Together, these landscape issue account for about \$23,500. Additional historical research combined with a historic marker at the site are estimated to cost \$10,000.

The third phase costs are limited -- about \$10,150 and involve primarily tree care and a public brochure on the cemetery.

Jackson Street Cemetery

The preservation needs for the Jackson Street Cemetery are more complex, with a total cost of approximately \$127,750 over five years.

The first phase of this work suggested for the current fiscal year amounts to \$26,750. The largest portion of these funds, an estimated \$12,000, is devoted to changes at the entrance of the cemetery to allow for easier entrance and exit. These changes not only make the cemetery safer for drivers, but will allow more frequent and effective police patrols. The work also has the potential to improve the appearance of the cemetery.

Other first year costs are more moderate, including \$5,000 for infilling graves (and resetting the stones on those graves) and \$3,000 for inspection and probable removal of the pine tree in the cemetery. We propose \$2,800 for conservation treatments of stones in the cemetery.

The second phase of work at Jackson Street is more costly, amounting to \$96,000. Most of these funds -- \$50,000 -- are intended to

fund resodding portions of the cemetery. Establishing a good turfgrass will reduce overall maintenance costs and dramatically improve the appearance of the cemetery. \$12,000 is intended to institute a weed eradication program elsewhere in the cemetery to begin converting salvageable portions of the turf.

An additional \$20,000 is proposed for removal of vegetation along the edges of the cemetery and cleaning the woods in those areas. This, too, will improve the cemetery's appearance.

Another major expenditure in this second phase is \$8,000 to conduct additional historical research designed to better understand Suwanee's African American community and those using the cemetery.

In the third funding phase, we propose only \$5,000 for the development of a brochure, similar to that proposed for Shadowbrook. It would tell the story of the cemetery, perhaps highlight some of the more interesting individuals buried in the cemetery, and provide a means for public education.

Sims Lake Park Cemetery

Although we do not propose opening the cemetery to the public – believing that its location is too isolated and the city's staff is stretched too thin to allow for adequate monitoring, there are still clear long-term preservation costs. At the Sims Lake Park Cemetery (also known as Douglass Cemetery), we estimate \$62,000 will be needed over the five year project.

The first phase has a modest cost of \$20,500. Most of this cost, an estimated \$10,000, will involve assessment and pruning of the trees in the cemetery. An additional \$7,000 is allotted to the removal – and replacement – of the dead cedars since they are integral to the context and appearance of the cemetery.

In the second phase, conducted over 2-3 years, we allot an additional \$15,000 for tree care and \$5,000 for the creation of a rustic path to the cemetery. The path is necessary to allow staff easy and quick access to the property for weekly inspections, as well as long-term maintenance needs.

Also in the second phase we propose \$12,500 in conservation treatment needs. This will ensure the monuments are repaired and stabilized as necessary.

The final phase of work at Sims (although as with all cemeteries there will long-term maintenance needs), we propose \$5,000 for creation of a brochure similar to those for Jackson Street and Shadowbrook cemeteries. This brochure is of special concern since access to the cemetery should be limited.

Summary

Although we discuss the various funding issues, one of the first steps that we believe necessary is for the city to ensure ownership of these cemeteries and then establish ordinances that provide protection. We have provided examples of how similar Georgia communities have handled these issues and suggest that clearing the title and enacting appropriate provisions should be done quickly. It is critical to maintain momentum – there must be a perception of progress.

RECOMMENDATIONS AND FUNDING

Table 4.
Prioritization of Recommendations at Shadowbrook Cemetery

Priority	Task	Cost
First – this fiscal or calendar year	1.1 The city should obtain fee simple ownership of the cemetery or otherwise clear the title to ensure that they have full control.	n/c
	1.2 The city should develop a cemetery ordinance that deals with critical issues such as damage and vandalism, appropriate conduct, establishing hours of operation, and a requirement that all modifications be approved.	n/c
	1.3 The cemetery should be closed to future burials unless an individual can produce a title to a plot.	n/c
	1.4 All decisions regarding modifications, alterations, additions, or other actions affecting the cemetery should be carefully evaluated against the Secretary of the Interior's Standards for Preservation. The remaining historic fabric and context of the cemetery should be protected.	n/c
	1.5 The city should establish a protocol for assisting disabled clients and visitors. This should include appropriate training of staff and a means to provide access to remote graves.	n/c
	1.6 The cemetery should develop a policy and form for identifying, reporting, and responding to damage, vandalism, and theft within Shadowbrook.	n/c
	1.7 The city should work to ensure that there are routine police patrols around the perimeter of the cemetery.	n/c
	1.8 The one remaining plot gate in the cemetery should be secured using woven stainless steel wire, attaching the gate to its hinge post.	\$50
	1.9 A policy should be adopted to collect, inventory, and store isolated or orphaned stone fragments until they can be reintegrated into the cemetery.	n/c
	1.10 The cemetery should immediately implement a maintenance program for the one iron fence in the cemetery that consists – minimally – of painting.	\$4,500
	1.11 The use of large deck mowers at Shadowbrook should be limited to the outlying areas with few or no monuments. Elsewhere only 21-inch walk behind mowers should be used. All mowers should be fitted with closed cell foam bumpers to reduce potential stone damage. These bumpers should be inspected weekly and replaced as needed.	\$100
	1.12 The nylon trimmer line should be no thicker than 0.065-inch. Operators of the equipment should be instructed in the proper use of the equipment to minimize damage to the stones in the cemetery.	n/c
	1.13 Soil analysis (5 tests) should be conducted to determine if adjustments are necessary for the turfgrass or tree.	\$50
	1.14 It is critical that the city develop a fire ant control program that involves, minimally, individual mound treatments.	\$300
	1.15 One technician should be assigned to the cemeteries on a part-time basis (three days a week), with additional assistance as needed. This will establish continuity and help ensure quality maintenance.	n/c
	1.16 The technician assigned to the cemetery should be certified by PLANET (or some similar local organization) in categories such as Landscape Technician – Exterior, Turfgrass Professional, or Ornamental Landscape Professional.	\$2,500
	1.17 Volunteer trees whose placement or growth threatens monuments should be removed.	n/c
	1.18 As a general rule, trees that are removed from the landscape should be replaced using historically appropriate species, such as oak or cedar.	n/c

Table 4, cont.
Prioritization of Recommendations at Shadowbrook Cemetery

Priority	Task	Cost
First – this fiscal or calendar year	1.19 All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004). Nursery stock should be carefully inspected and specimens with wounds, crooked or double leaders, broken branches, or girdling roots should be rejected.	n/c
	1.20 The use of gravel in plots should be discouraged. Grass is more historically appropriate and easier to maintain. Descendents, if they wish to keep gravel, must be responsible for its upkeep.	n/c
	1.21 While shrubbery is limited at Shadowbrook, there are several plots where shrubs have been overtaken by weedy growth. These require immediate attention, with the weedy material being removed by hand. The shrubbery may require renewal pruning.	n/c
	1.22 Erosion at the cemetery edges should be addressed through sodding. This is especially true for the eroded area along the municipal building parking lot.	\$3,000
	1.23 The city should develop regulatory signage for Shadowbrook. This signage should minimally deal with proper care of the monuments, prohibiting rubbings and warning visitors of their fragile condition; it should prohibit certain behaviors and actions, such as use of alcoholic beverages; it should establish simple guidelines for plantings, as well as the placement and removal of floral and grave decorations; and it should include contact and emergency information.	\$1,000
	1.24 All conservation work in the cemetery should be conducted by trained conservators who subscribe to the Code of Ethics and Standards of Practice of the American Institute for Conservation of Historic and Artistic Works (AIC). This should be the minimum level of competency required by the city on all projects.	n/c
	1.25 There are some treatments, such as resetting, cleaning, and some aspects of fence repair, which can be undertaken by volunteers and/or in-house staff with training and oversight. Other work, such as mechanical repairs and infills, should only be performed by trained conservators.	n/c
	1.26 Cleaning is a low preservation priority and the city should work with families to explain the problems that result from cleaning. The city should also work to educate families on the least damaging cleaning techniques.	n/c
	1.27 First priority conservation treatments should be conducted as soon as possible since many of the stones need immediate attention.	\$16,000
	2.1 Shadowbrook lacks a comprehensive, detailed history of its founding and operation. One should be prepared taking into special consideration the issues raised during this brief overview.	\$6,000
Second – over next 2 to 3 years	2.2 Limited pre-emergent and post-emergent weed control should be instituted using care to prevent the stones from exposure to the herbicides.	\$8,000
	2.3 In heavy shade areas we recommend the conversion from turfgrass to mulch. This will reduce maintenance demands and provide a healthier environment for the historic tree.	\$500
	2.4 Turf in portions of Shadowbrook should be renovated, with areas resodded to provide dense turf.	\$10,000
	2.5 The large, historic oak tree in the cemetery should be pruned for thinning or cleaning as recommended by an ISA certified arborist.	\$5,000
	2.6 Develop text and supporting documentation for a Georgia historical marker program. This would be an appropriate and dignified way to explain to visitors the historic roots and significance of the cemetery.	\$4,000
	2.7 Second priority stone treatments should be conducted as soon as funding allows.	\$13,000

RECOMMENDATIONS AND FUNDING

Table 4, cont.
Prioritization of Recommendations at Shadowbrook Cemetery

Priority	Task	Cost
Third – over next 3 to 5 years	3.1 The historic tree within the cemetery should be fertilized on a routine basis and should be professionally evaluated and pruned at least once every 5 years by an ISA Certified Arborist. It should be inspected yearly and after any storm with winds in excess of 55 mph.	\$5,000
	3.2 Develop a brochure specific to the cemetery that includes rules, a map, a brief history, and perhaps some information on those buried in the cemetery. While primarily intended for families and visitors, it could also be used for promotion and fund raising.	\$5,000
	3.3 The final phase of conservation work at Shadowbrook should be funded. This cost is so low that the city may wish to include it in the second priority funding.	\$150

PRESERVATION ASSESSMENT OF THREE SUWANEE, GEORGIA CEMETERIES

Table 5.
Prioritization of Recommendations at Jackson Street Cemetery

Priority	Task	Cost
First – this fiscal or calendar year	1.1 The city should obtain fee simple ownership of the cemetery or otherwise clear the title to ensure that they have full control	n/c
	1.2 The city should develop a cemetery ordinance that deals with critical issues such as damage and vandalism, appropriate conduct, establishing hours of operation, and a requirement that all modifications be approved.	n/c
	1.3 The cemetery should be closed to future burials unless an individual can produce a title to a plot.	n/c
	1.4 All decisions regarding modifications, alterations, additions, or other actions affecting the cemetery should be carefully evaluated against the Secretary of the Interior's Standards for Preservation. The remaining historic fabric and context of the cemetery should be protected.	n/c
	1.5 The city should establish a protocol for assisting disabled clients and visitors. This should include appropriate training of staff and a means to provide access to remote graves.	n/c
	1.6 The city should contact the neighbors of the Jackson Street Cemetery and solicit their assistance in observing the cemetery and reporting any inappropriate activities to the police.	n/c
	1.7 The city should develop a policy and form for identifying, reporting, and responding to damage, vandalism, and theft within Jackson Street Cemetery.	n/c
	1.8 The city should work to ensure that there are routine police patrols specifically covering Jackson Street cemetery.	n/c
	1.9 Changes should be made to the entrance of Jackson Street Cemetery that will allow easier vehicular exit from the parking area. This may include creating a circular drive or a more elaborate grading project to create head-in parking.	\$12,000
	1.10 Sunken graves at Jackson Street should be carefully hand-filled with clean sand. Monuments and grave goods will need to be reset.	\$5,000
	1.11 Only 21-inch walk behind mowers should be used at the Jackson Street Cemetery. All mowers should be fitted with closed cell foam bumpers to reduce potential stone damage. These bumpers should be inspected weekly and replaced as needed.	\$100
	1.12 The nylon trimmer line should be no thicker than 0.065-inch. Operators of the equipment should be instructed in the proper use of the equipment to minimize damage to the markers in the cemetery.	n/c
	1.13 Soil analysis (5 tests) should be conducted to determine if adjustments are necessary for the turfgrass.	\$50
	1.14 It is critical that the city develop a fire ant control program that involves, minimally, individual mound treatments.	\$300
	1.15 One technician should be assigned to the cemeteries on a part-time basis (three days a week), with additional assistance as needed. This will establish continuity and help ensure quality maintenance.	n/c
	1.16 The technician assigned to the cemetery should be certified by PLANET (or some similar local organization) in categories such as Landscape Technician – Exterior, Turfgrass Professional, or Ornamental Landscape Professional.	\$2,500
	1.17 The pine tree in Jackson Street Cemetery should be evaluated by an ISA Certified Arborist and removed if necessary.	\$3,000
	1.18 As a general rule, trees that are removed from the landscape should be replaced using historically appropriate species, such as cedar.	n/c

RECOMMENDATIONS AND FUNDING

Table 5, cont.
Prioritization of Recommendations at Jackson Street Cemetery

Priority	Task	Cost
First - this fiscal or calendar year	1.19 All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004). Nursery stock should be carefully inspected and specimens with wounds, crooked or double leaders, broken branches, or girdling roots should be rejected.	n/c
	1.20 The city should develop regulatory signage for Jackson Street. This signage should minimally deal with proper care of the monuments, prohibiting rubbings and warning visitors of their fragile condition; it should prohibit certain behaviors and actions, such as use of alcoholic beverages; it should establish simple guidelines for plantings, as well as the placement and removal of floral and grave decorations; and it should include contact and emergency information.	\$1,000
	1.21 All conservation work in the cemetery should be conducted by trained conservators who subscribe to the Code of Ethics and Standards of Practice of the American Institute for Conservation of Historic and Artistic Works (AIC). This should be the minimum level of competency required by the city on all projects.	n/c
	1.22 There are some treatments, such as resetting, cleaning, and some aspects of fence repair, which can be undertaken by volunteers and/or in-house staff with training and oversight. Other work, such as mechanical repairs and infills, should only be performed by trained conservators.	n/c
	1.23 Cleaning is a low preservation priority and the city should work with families to explain the problems that result from cleaning. The city should also work to educate families on the least damaging cleaning techniques.	n/c
	1.24 Conduct first priority conservation treatments at the Jackson Street Cemetery as soon as possible to prevent additional losses.	\$2,800
Second - over next 2 to 3 years	2.1 Jackson Street has several gaps in its historic record and an effort should be made to fill these blanks. In addition, further research should be conducted into those who have historically used the cemetery	\$8,000
	2.2 Limited pre-emergent and post-emergent weed control should be instituted using care to prevent the stones from exposure to the herbicides.	\$12,000
	2.3 In heavy shade areas we recommend the conversion from turfgrass to mulch. This will reduce maintenance demands.	\$1,200
	2.4 Turf in much of Jackson Street should be renovated, with areas resodded to provide dense turf.	\$50,000
	2.5 Volunteer growth around the edges of Jackson Street should be cleared back 25-50 feet. During this process these areas should be cleaned.	\$20,000
	2.6 Develop text and supporting documentation for a Georgia historical marker program. This would be an appropriate and dignified way to explain to visitors the historic roots and significance of the cemetery.	\$4,000
Third - over next 3 to 5 years	2.7 Place an appropriate trash container at the entrance to Jackson Street Cemetery	\$800
	3.1 Develop a brochure specific to the cemetery that includes rules, a map, a brief history, and perhaps some information on those buried in the cemetery. While primarily intended for families and visitors, it could also be used for promotion and fund raising.	\$5,000

PRESERVATION ASSESSMENT OF THREE SUWANEE, GEORGIA CEMETERIES

Table 6.
Prioritization of Recommendations at Sims Lake Park Cemetery

Priority	Task	Cost
First – this fiscal or calendar year	1.1 The city should develop a cemetery ordinance that deals with critical issues such as damage and vandalism, appropriate conduct, establishing hours of operation, and a requirement that all modifications be approved.	n/c
	1.2 The cemetery should be closed to future burials.	n/c
	1.3 All decisions regarding modifications, alterations, additions, or other actions affecting the cemetery should be carefully evaluated against the Secretary of the Interior's Standards for Preservation. The remaining historic fabric and context of the cemetery should be protected.	n/c
	1.4 The city should develop a policy and form for identifying, reporting, and responding to damage, vandalism, and theft within Sims Lake Park Cemetery.	n/c
	1.5 The Sims Lake Park Cemetery should be inspected by park staff at least weekly.	n/c
	1.6 Given the isolated location this cemetery, public access should be limited to the area outside the fenced cemetery.	n/c
	1.7 One technician should be assigned to the cemeteries on a part-time basis (three days a week), with additional assistance as needed. This will establish continuity and help ensure quality maintenance.	n/c
	1.8 The technician assigned to the cemetery should be certified by PLANET (or some similar local organization) in categories such as Landscape Technician – Exterior, Turfgrass Professional, or Ornamental Landscape Professional.	\$2,500
	1.9 Volunteer growth under 4-inch dbh should be removed to open the cemetery, while still maintaining the overhead canopy.	n/c
	1.10 Dead cedars in the cemetery should be removed by an ISA Certified Arborist.	\$6,000
	1.11 The remaining trees in the cemetery should be pruned for thinning or cleaning as recommended by an ISA certified arborist.	\$10,000
	1.12 The removed cedars should be replaced using cedars. All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004). Nursery stock should be carefully inspected and specimens with wounds, crooked or double leaders, broken branches, or girdling roots should be rejected.	\$1,000
	1.13 The city should develop regulatory signage for Sims Lake Park Cemetery. This signage should minimally warning visitors of the fragile condition of the monuments; it should prohibit certain behaviors and actions, such as use of alcoholic beverages; and it should include contact and emergency information.	\$1,000
	1.14 All conservation work in the cemetery should be conducted by trained conservators who subscribe to the Code of Ethics and Standards of Practice of the American Institute for Conservation of Historic and Artistic Works (AIC). This should be the minimum level of competency required by the city on all projects.	n/c
	1.15 There are some treatments, such as resetting and cleaning, which can be undertaken by volunteers and/or in-house staff with training and oversight. Other work, such as mechanical repairs and infills, should only be performed by trained conservators.	n/c
	1.16 Cleaning is a low preservation priority and the city should work with families to explain the problems that result from cleaning. The city should also work to educate families on the least damaging cleaning techniques.	n/c

RECOMMENDATIONS AND FUNDING

Table 6, cont.
Prioritization of Recommendations at Sims Lake Park Cemetery

Priority	Task	Cost
Second – over next 2 to 3 years	2.1 Research concerning the Sims Lake Park Cemetery should focus on the families buried there in an effort to better connect the families.	\$4,000
	2.2 The city should create a rustic pathway to the cemetery, allowing access by maintenance vehicles.	\$5,000
	2.3 The historic trees within the cemetery should be fertilized on a routine basis and should be professionally evaluated and pruned at least once every 5 years by an ISA Certified Arborist. They should be inspected yearly and after any storm with winds in excess of 55 mph.	\$15,000
	2.4 Conduct conservation treatments during the second phase of work at Sims Lake Cemetery.	\$12,500
Third – over next 3 to 5 years	3.1 Develop a brochure specific to the cemetery that includes rules, a map, a brief history, and perhaps some information on those buried in the cemetery. While primarily intended for families and visitors, it could also be used for promotion and fund raising.	\$5,000
